Equipment Logbook Register

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

Lists every saved Equipment Log Book (ELB) of the chosen dates, one line per book, with its HMR readings and running hours. MIS staff use it to find a book and to check its readings against the paper log book.

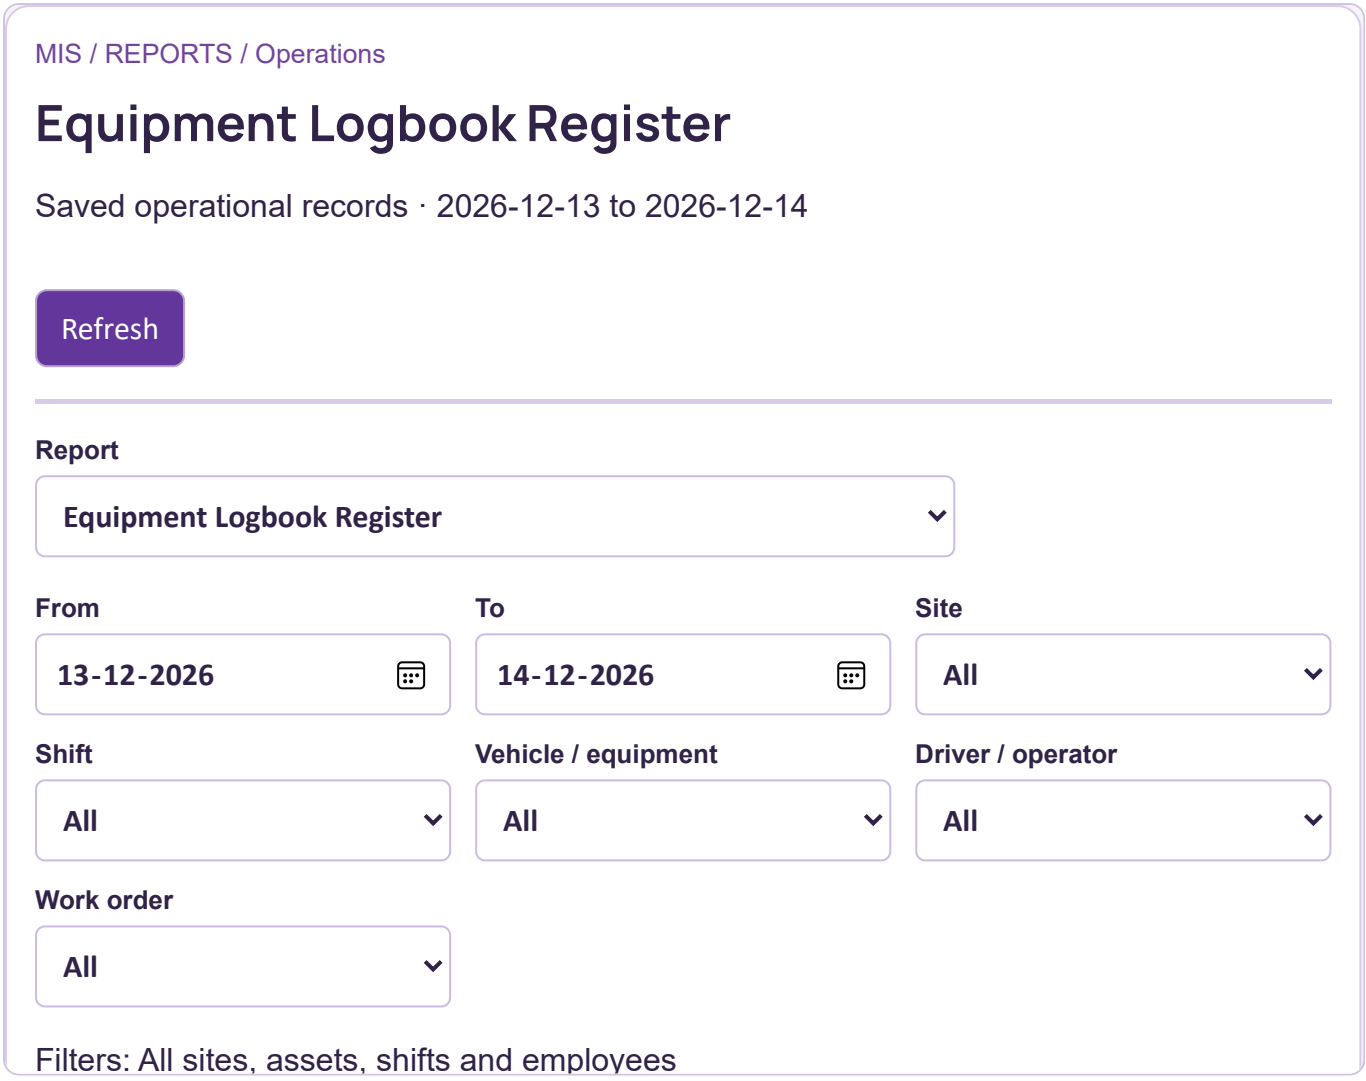

> **One row.** One row is one saved Equipment Log Book: one equipment, one operator and one shift on one date.

2. Open the report and choose what to see

In the left menu open **Reports** → **Operations** → **Equipment Logbook Register**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last date to include, by the Book Date of the log book. Both start on today's date. Dates before 01-11-2026 cannot be chosen, From must not be after To, and the range can be at most 366 days. If the dates are not valid, the screen shows "Choose a valid date range of at most 366 days." and no data is loaded. Changing a date loads the data again.
Site	Keeps only the log books of one site. "All" keeps every site your login can see. Once a site is chosen, the Shift, Vehicle / equipment, Driver / operator and Work order lists show only that site's entries.
Shift	Keeps only the log books of the chosen shift. Every shift in the list belongs to one site, so shifts of the same name at two sites appear as separate entries. Choose Site first, then Shift.
Vehicle / equipment	Keeps only the log books of the chosen door number. The list also has vehicle doors; choosing one of them leaves this table empty.
Driver / operator	Keeps only the log books saved in the name of the chosen person. The list has only the people found on the log books and scan cards of the chosen dates.
Work order	Keeps only the log books saved against the chosen work order. The list has only the work orders found on the log books and scan cards of the chosen dates.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Drop-down at the top with every report, listed under its group. Choosing a name opens that report.
Saved operational records	Line under the report name. It repeats the From and To dates in use.
Refresh	Loads the saved log books again for the same dates. Press it when log books were saved or corrected after the report was opened. While data is loading the button cannot be pressed and "Loading complete report data…" is shown.
Filters:	One line listing the selectors that are set. With none set it reads "All sites, assets, shifts and employees". The line uses short names: site, shift, asset (Vehicle / equipment), employee (Driver / operator), workOrder and loading. For shift, asset and employee it shows the record number of the choice, not its name.
logbooks	Number of saved log books, VLB and ELB together, that match the dates and filters.
assets	Number of different vehicles and equipment on those log books.

trips	Total trips on those log books.
report rows	Number of rows in the table below.
No matching records or exceptions found.	Shown inside the table when nothing matches the dates and filters.

4. The columns

Column	Meaning
Date	Book Date of the log book. On screen it shows as DD-MM-YY, for example 13-12-26.
Site	Site saved on the log book.
Book NO	Book number the system gave when the log book was saved, for example CAL/ELB/13-12-26/001.
Door NO	Door number of the equipment, for example TPC901.
Caliber ID	Employee ID of the operator on the log book, for example CMPL90001.
Employee	Name of the operator on the log book, for example SAMPLE DRIVER 01.
Shift	Shift name saved on the log book.
WO / Contract	Work order saved on the log book. Shows — when the log book has none.
OPN HMR	Opening HMR reading saved on the log book.
CLO HMR	Closing HMR reading saved on the log book.
Running HRS	Running hours of the log book: CLO HMR minus OPN HMR.
Trips	Trips saved on the log book. Equipment log books are saved without trip rows, so this shows 0. Trips loaded by an equipment are in Loading Equipment-wise Report.
Remarks	Remark saved on the log book.

5. Keep in mind

- Only Equipment Log Books are listed. Vehicle log books are in Vehicle Logbook Register. LMV log books and deleted log books are not shown.
- The four counts above the table take VLB and ELB together, so "logbooks" and "trips" can be more than the table shows.
- An equipment log book saved with the status Breakdown, Maintenance, No operator or Not in use can be saved without an operator. Caliber ID and Employee then show —.
- Rows are not always in date order. Press the Date heading to sort by date. An empty cell shows —.
- "Reset table" in the Actions menu of the table also puts From and To back to today's date.
- You see only the sites your login is allowed to see.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From and To, choose Site, and if needed choose Vehicle / equipment or Driver / operator.
2	Find the book by its Door NO or Book NO.
3	Compare OPN HMR and CLO HMR with the paper log book.
4	Choose one equipment in Vehicle / equipment and check that the OPN HMR of each book is the same as the CLO HMR of that equipment's previous book. Books where they differ are also listed in Reports → Utilisation & Exceptions → Meter Reading Exceptions.
5	Compare Running HRS with the shift hours. For the hours not run, see Reports → Utilisation & Exceptions → Breakdown & Idle Hours.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why does Trips show 0?	Equipment log books are saved without trip rows. Trips loaded by an equipment are counted from vehicle log books; see Reports → Trips & Productivity → Loading Equipment-wise Report.
A log book I saved is not in the list. Why?	Check that From and To cover the Book Date of the book (not the day it was typed), set the other selectors to All and press Refresh. LMV log books, deleted log books and books of sites your login cannot see are not listed.
Why is "trips" above the table not 0 when every row shows 0?	The count above the table also includes the vehicle log books of the same dates and filters.
