CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · COMMERCIAL

Target versus Actual

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

This tab is kept for a report that compares targets with actual work. Today it does not show any target, shortfall or achievement percentage: the table has one row that names the data still needed ("Approved targets for each shift, day or month") with the status "Source not connected". The totals line above the table still counts the saved log books, assets and trips for the chosen dates; these counts are the only actual figures on the screen.

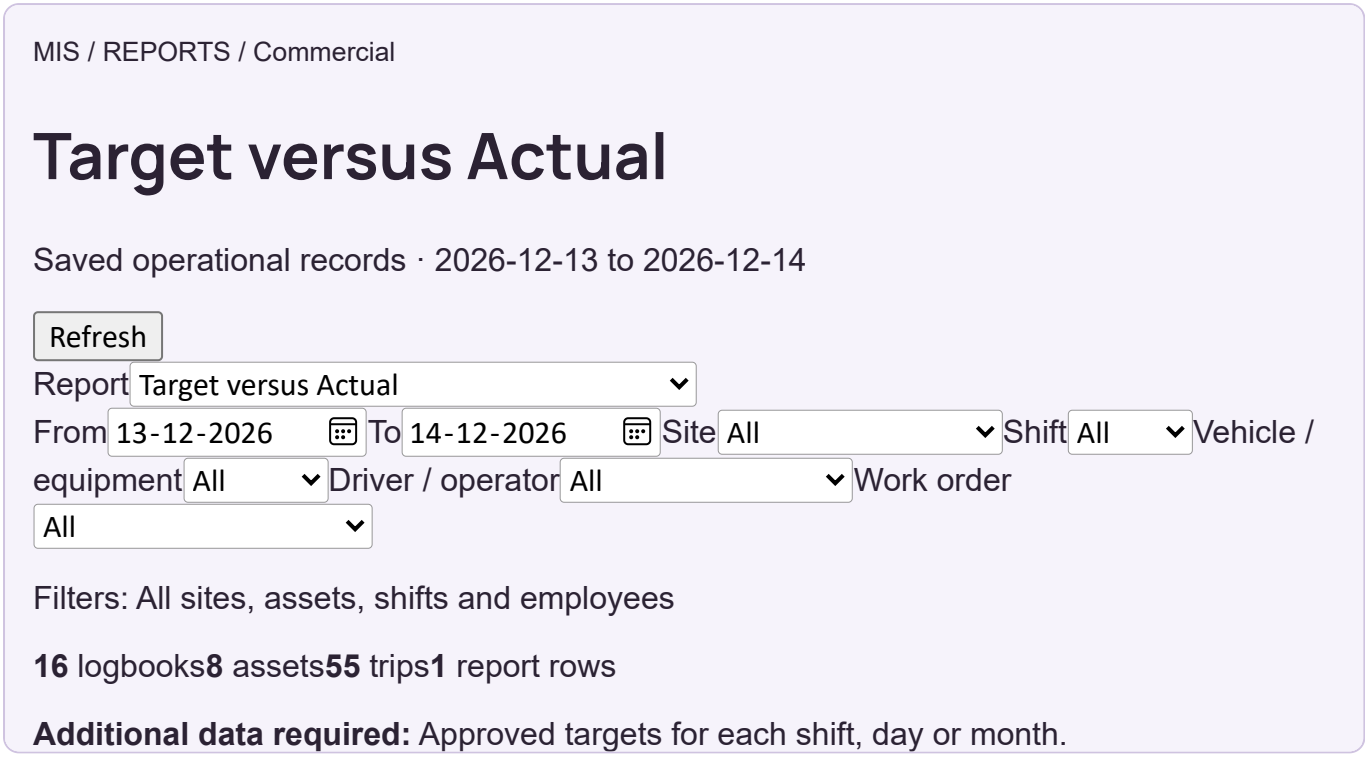

> **One row.** The table has a single row. It is not a target or an actual record; it only names the data the report needs and says that its source is not connected.

2. Open the report and choose what to see

In the left menu open **Reports** → **Commercial** → **Target versus Actual**. Then set the selectors described below.

Selector or button	What it does
From	First book date for the totals line. It opens on the 1st of the current month (India time). Dates before 1 November 2026 are not accepted. It does not change the table row.
To	Last book date for the totals line. It cannot be earlier than From, and From to To can cover at most 366 days. If the dates are not valid the screen shows "Choose a valid date range of at most 366 days." and nothing is shown. Keep in mind: Actions → Reset table also puts From back to the 1st of the current month and To back to today.
Site	Narrows the saved log books counted in the totals line to that site. "All" means every site assigned to your login. The table row stays the same.
Shift	Narrows the totals line to log books of that shift. The table row stays the same.
Vehicle / equipment	Narrows the totals line to log books of that door number. The table row stays the same.
Driver / operator	Narrows the totals line to log books of that person. The table row stays the same.
Work order	Narrows the totals line to log books saved against that work order. The table row stays the same.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Picker at the top of the screen. It lists all reports under their groups; choosing a name opens that report.
Refresh	Loads the saved records for the chosen dates again. On this report it updates only the totals line.
Filters:	One line showing what is selected in Site, Shift, Vehicle / equipment, Driver / operator and Work order, written as "site: …", "shift: …", "asset: …", "employee: …" and "workOrder: …". With nothing selected it reads "All sites, assets, shifts and employees". Site and Work order appear by name; Shift, Vehicle / equipment and Driver / operator appear as the system's internal number.
logbooks	Number of saved VLB and ELB log books that match the dates and selectors.
assets	Number of different doors on those log books.
trips	Total trips on those log books. This is the actual trip count; no target is shown beside it.
report rows	Always 1 on this report.
Additional data required: Approved targets for each shift, day or month.	Notice naming the data this report still needs.

This report needs an additional data source. No quantities, rates or results have been estimated.	Notice confirming that nothing on this tab is calculated or estimated.

4. The columns

Column	Meaning
Required data	The data the report needs: "Approved targets for each shift, day or month".
Status	Always "Source not connected".

5. Keep in mind

- No target, shortfall or achievement percentage is produced on this tab. Nothing is compared.
- The only figures on the screen are in the totals line (logbooks, assets, trips). They come from saved VLB and ELB log books of sites assigned to your login.
- Actual trips by date, site and shift can be read in Daily Operations Summary under Reports → Operations.
- Download as PDF, Download as Excel and Smart Print give the same one-row table.
- The screen does not say when the data source will be connected.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Open the report and read the notice "Additional data required: Approved targets for each shift, day or month."
2	Confirm that the table shows one row with Status "Source not connected".
3	If you need the actual trips for a period, set From, To, Site and Shift and read trips in the totals line.
4	Do not read any figure on this tab as a target or as an achievement percentage.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer

Why does the table have only one row?	The report has no source for approved targets, so it only shows which data is needed and the status "Source not connected".
Where is the actual figure?	The trips total above the table is the actual trip count from saved log books for the chosen dates and selectors. There is no target on the screen to compare it with.
I chose a shift but the table did not change. Why?	The selectors change only the totals line. The table row is fixed.
