CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · MANPOWER & OT

Manpower by Category Reconciliation

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 10 November 2026

1. What this report shows

Compares the machines available at a site with what the saved VLB and ELB cards show, shift by shift: how many had a card saved, how many did active production, how many had zero trips, how many had zero kilometres, and how many had no card at all. It opens in steps: every site, one site shift by shift, one shift by equipment category, then the machines. A site in-charge or MIS clerk uses it to see how much of the fleet was actually deployed in each shift.

> **One row.** In Step 1 one row is one site. In Step 2 one row is one date and shift of the opened site. In Step 3 one row is one equipment category. In Step 4 one row is one machine in one shift on one date.

2. Open the report and choose what to see

In the left menu open **Reports** → **Manpower & OT** → **Manpower by Category Reconciliation**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last duty date of the report. Both open on today's date. A date before 1 November 2026 cannot be chosen, To cannot be earlier than From, and the range can cover at most 31 days. Outside these limits nothing loads and the screen says "Choose a valid range of up to 31 days, starting on or after 1 November 2026."
Site	Keeps only the cards of one site. "All" means every site assigned to your login. Changing the site sets Saved batch and Door / equipment back to "All".
Shift	Keeps only the cards of one shift. The list shows the shift codes found in the loaded records, for example S1, S2, S3.
Saved batch	Keeps only the cards saved in one batch. The list holds the batches dated within From and To and the batches of the loaded cards. A batch with no saved card can be chosen, but it gives no count.
Employee	Keeps only the cards whose Employee ID was matched to that employee. Each entry reads Employee ID · name, for example "CMPL90001 · SAMPLE DRIVER 01". Cards with an unmatched ID are not shown while an employee is chosen.
Door / equipment	Keeps only the cards of one door number, for example V9001.
Today	Button. Sets From and To to today's date. The other selections stay.
Clear selections	Button. Sets Site, Shift, Saved batch, Employee and Door / equipment back to "All". The dates stay.

Auto-hide filters	Tick box. When ticked, the selectors are tucked away and only a bar with the current dates, site and shift stays on screen. Move the mouse over the bar, or press it, to open the selectors; they close when the mouse leaves. The choice is remembered in this browser.
Refresh reports	Button at the top right. Reads the saved records again with the same selections. It cannot be pressed while a load is running.

3. What is on the screen

On the screen	What it shows
REPORTS / MANPOWER & OT	The page heading, with the title “Manpower by Category Reconciliation” under it. The next line reads “Saved duties, clear assignments and shift-by-shift performance.”
Manpower by Category · Manpower by Category Reconciliation · Shift Performance · Shift Attendance Equipment Wise · OT & Multiple Duties	The tab row. Press a name to open that view. The dates and selections stay the same when you move between these five tabs.
Bar above the selectors	Shows the From and To dates in use, the site (or “All assigned sites”), the shift (or “All shifts”) and how many of Saved batch, Employee and Door / equipment are set, for example “2 more selections”. The bar can be pressed only when “Auto-hide filters” is ticked.
Loading saved records and checking shift patterns…	Shown while the report is being read. The tables appear when the reading is over.
Error message	If the report cannot be read, the reason is shown in place of the tables. For example, when the chosen dates hold more than 50,000 saved cards the screen says “This range contains too many saved cards. Select a shorter date range.”
Line under the selectors	Repeats the dates, site and shift in use, then “Saved records only” and “Updated … IST”, the time at which this report was read.
Line above the steps (notice)	Says what is counted: Available is the machines the Equipment master places at the site today, as on the Fleet reconciliation screen, with LMVs left out, and totals over several shifts are machine-shifts.
Line showing where you are	For example “All sites › Sasti OC › 05-11-26 · Shift 1 › Volvo Tippers · No card”. Press any part of it to step back to that level.
Step 1 · All sites	One line for every site assigned to your login, and an “All sites” line, for all the selected dates and shifts together. Press any number on a line to open that site; press it again to close it.
Step 2 · shift by shift	Opens when a site is pressed. One line for every selected date and shift, and an “All dates · All shifts” line at the bottom. Press any number on a line to open Step 3 for that date and shift.

Step 3 · by equipment category	Opens when a line of Step 2 is pressed. One line for each equipment category (the equipment group in the Equipment master) and an “All categories” line. Press a category name or its Available number to list all its machines; press another number to list only those machines, for example only the machines with No card.
Step 4 · machines	Opens when a category or a number in Step 3 is pressed. One line for each machine in that shift, with its status and what its cards show.
… saved cards need correction (list for the MIS team)	Shown near the bottom when a saved card has a data problem. Press it to open “Manpower Data Review”, the list of those cards.
Sources and calculation rules	Press to open the written rules the report follows.

4. The columns

Column	Meaning
Steps 1 to 3 · Machines in fleet	Step 1 only. The number of different machines the Equipment master places at the site today.
Steps 1 to 3 · Available	Machines in the fleet list, counted once for every date and shift the line covers. For one shift it equals the machines in the fleet.
Steps 1 to 3 · Card saved	Fleet machines with a saved VLB or ELB card in that shift.
Steps 1 to 3 · Active production	Of those, the machines whose VLB card has at least one completed trip, or whose ELB card has running hours or trips.
Steps 1 to 3 · Zero trips	Machines with a card saved but no active production: a VLB card with 0 trips or no trips written, or an ELB card with no running hours and no trips. Card saved = Active production + Zero trips.
Steps 1 to 3 · Zero km	Machines whose VLB cards for the shift add up to 0 kilometres. A zero-km machine can also be counted under Zero trips or under Active production.
Steps 1 to 3 · No card	Available minus Card saved: fleet machines with no saved card in that shift.
Steps 1 to 3 · Deployed %	Card saved divided by Available, multiplied by 100. “—” when nothing is available.
Steps 1 to 3 · Not in fleet list	Saved cards of machines that the Equipment master places at another site today. They are not part of Available or Card saved.
Step 4 · Duty date, Shift, Site	Shown only when the list covers more than one date, shift or site.
Step 4 · Door / equipment	Door number of the machine.
Step 4 · Equipment category	Shown when “All categories” is open.
Step 4 · Make / model	From the Equipment master.
Step 4 · Status	“Active production”, “Zero trips”, “No card” or “Not in fleet list”, with “Zero km” added where the kilometres are 0.
Step 4 · Log book	VLB, ELB, or both.

Step 4 · Completed VLB trips, Kilometres, HMR hours	Totals of the machine's saved cards for that shift. "—" when there is no card or the value is not written.
Step 4 · Driver / operator	Names on the saved cards.
Step 4 · Saved cards	Card numbers behind the line.

5. Keep in mind

- Available comes from the Equipment master as it is today. The fleet list of an earlier date is not kept, so a machine moved to another site since then is counted at its present site, and its old cards appear under "Not in fleet list".
- Only saved VLB and ELB log books dated 1 November 2026 or later are read. Pending scans, deleted records and LMV log books are not counted, and LMVs are not part of Available.
- Totals over several shifts are machine-shifts: one machine in three shifts counts three times. Machines in fleet in Step 1 counts each machine once.
- Zero km is worked out for VLB cards only; an ELB machine is never counted under Zero km.
- Breakdown and idle reasons are not shown here. Open MIS → Fleet reconciliation for the reason a machine did not work.
- The Shift selection keeps one shift. The Saved batch, Employee and Door / equipment selections keep only the matching cards while Available stays the whole fleet, so use them with care on this tab.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From, To and Site. Read the "Updated" time and press "Refresh reports" if cards were saved after it.
2	In Step 1 read Deployed % and No card for each site, then press the site.
3	In Step 2 find the dates and shifts with a low Deployed % or a high Zero trips or Zero km, and press that line.
4	In Step 3 press the No card, Zero trips or Zero km number of a category and read the machines in Step 4.
5	Check "Not in fleet list": these machines have cards at this site but the Equipment master places them elsewhere. Get the master location corrected if the machine is really at this site.
6	Use Generate on any step to download it.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why is Available the same on every date?	It is the fleet the Equipment master places at the site today. The list for earlier dates is not kept.
Why are Zero trips and Zero km not the same number?	Zero trips counts machines with a card but no work, VLB or ELB. Zero km counts VLB machines whose kilometres add up to 0. A VLB can have trips written and 0 km, or 0 trips and some km.
A whole date shows No card for every machine. Why?	No VLB or ELB card of that date and shift has been saved yet for the site, or the cards are still pending in scanning.
Why does a machine show under “Not in fleet list”?	Its card was saved at this site, but the Equipment master now places the machine at another site, or the machine is not found in the master.
