CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · OPERATIONS

Site / Work Order Summary

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

Adds up the saved log books of the chosen dates for each site and work order: number of books, trips, kilometres and running hours. It is used to see the work recorded against each work order.

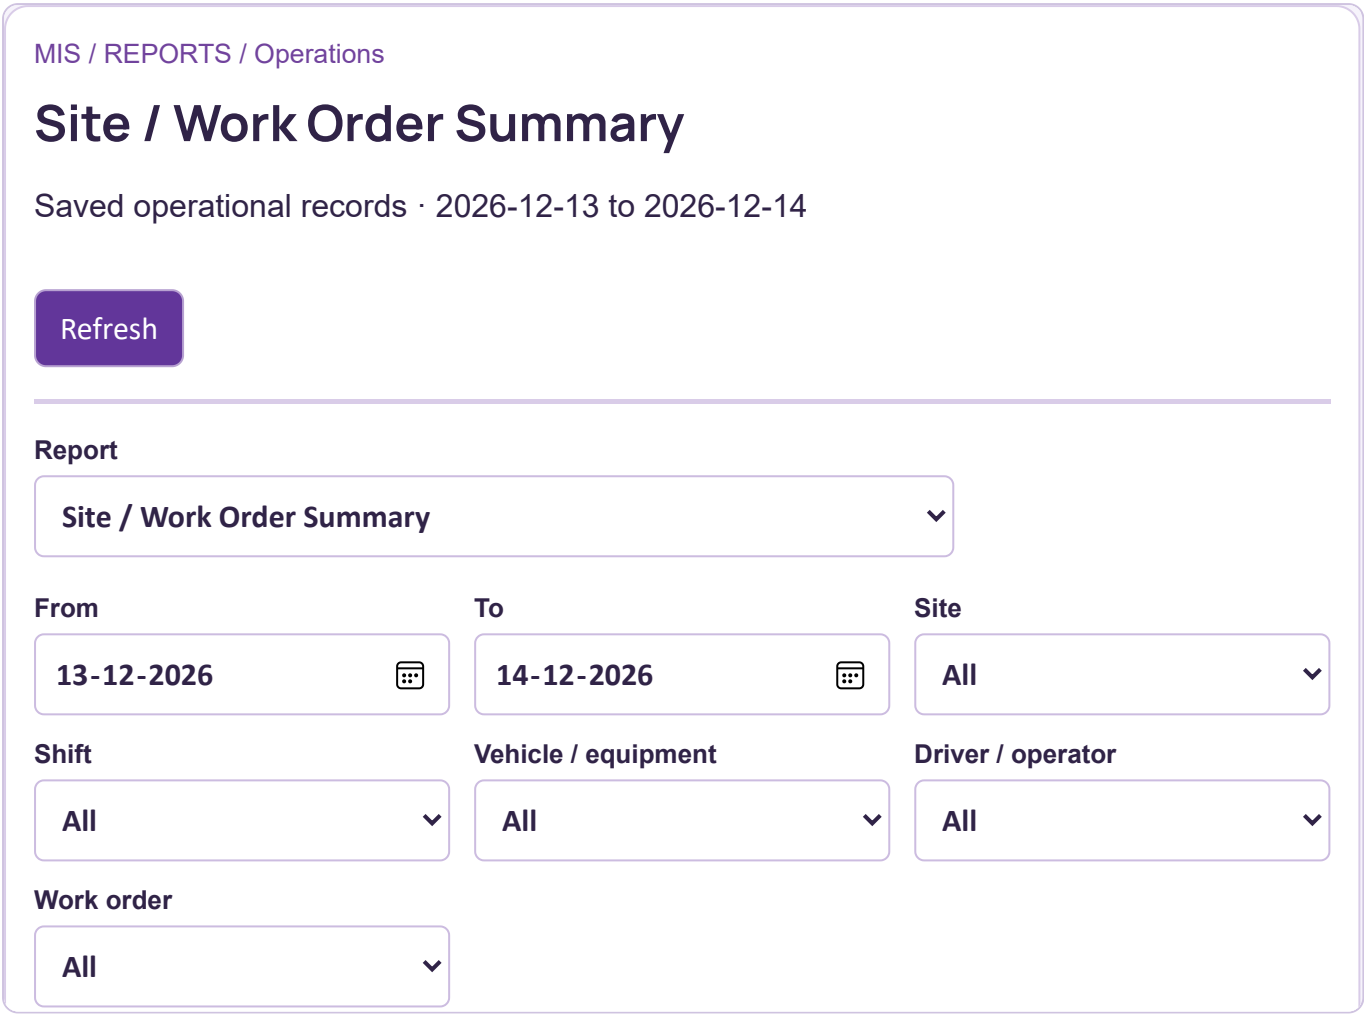

> **One row.** One row is one site and one work order. All saved VLB and ELB log books of that site and work order from From to To are added up in it.

2. Open the report and choose what to see

In the left menu open **Reports** → **Operations** → **Site / Work Order Summary**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last date to include, by the Book Date of the log book. Both start on today's date. Dates before 01-11-2026 cannot be chosen, From must not be after To, and the range can be at most 366 days. If the dates are not valid, the screen shows "Choose a valid date range of at most 366 days." and no data is loaded. Changing a date loads the data again.
Site	Keeps only the log books of one site. "All" keeps every site your login can see. Once a site is chosen, the Shift, Vehicle / equipment, Driver / operator and Work order lists show only that site's entries.
Shift	Keeps only the log books of the chosen shift. Every shift in the list belongs to one site, so shifts of the same name at two sites appear as separate entries. Choose Site first, then Shift.
Vehicle / equipment	Keeps only the log books of the chosen door number.
Driver / operator	Keeps only the log books saved in the name of the chosen person. The list has only the people found on the log books and scan cards of the chosen dates.
Work order	Keeps only the log books saved against the chosen work order. The list has only the work orders found on the log books and scan cards of the chosen dates.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Drop-down at the top with every report, listed under its group. Choosing a name opens that report.
Saved operational records	Line under the report name. It repeats the From and To dates in use.
Refresh	Loads the saved log books again for the same dates. Press it when log books were saved or corrected after the report was opened. While data is loading the button cannot be pressed and "Loading complete report data…" is shown.
Filters:	One line listing the selectors that are set. With none set it reads "All sites, assets, shifts and employees". The line uses short names: site, shift, asset (Vehicle / equipment), employee (Driver / operator), workOrder and loading. For shift, asset and employee it shows the record number of the choice, not its name.
logbooks	Number of saved log books, VLB and ELB together, that match the dates and filters.
assets	Number of different vehicles and equipment on those log books.
trips	Total trips on those log books.

report rows	Number of rows in the table below.
Notice below the counts	"Utilisation = recorded running hours ÷ scheduled hours of recorded logbooks. Duplicate entries can inflate totals; missing logbooks are not counted as zero." It says how Utilisation % is worked out. It also says that a log book entered twice raises the totals, while a log book that was not entered is left out and is not counted as zero.
No matching records or exceptions found.	Shown inside the table when nothing matches the dates and filters.

4. The columns

Column	Meaning
Site	Site saved on the log books.
WO / Contract	Work order saved on the log books. Shows "Unassigned" for log books saved without a work order.
Logbooks	Number of saved log books added up in this row.
Assets	Number of different vehicles and equipment on those log books.
Trips	Total trips of those log books. Trips come from the trip rows of vehicle log books (VLB); equipment log books (ELB) add none.
KM	Total kilometres of the vehicle log books in the row. For each book it is CLO KMR minus OPN KMR; if a book was saved with a separate actual distance because the meter was replaced, that distance is used. Equipment log books add none.
Running HRS	Total running hours: CLO HMR minus OPN HMR of each log book, added up. Blank if any log book in the row has no HMR reading.
Scheduled HRS	Shift hours of the log books in the row, added up; for example 8 or 12 for each book. Blank if any log book has no shift hours.
Utilisation %	Running HRS ÷ Scheduled HRS × 100, to at most 3 decimal places. Blank when Running HRS or Scheduled HRS is blank, or Scheduled HRS is 0.

5. Keep in mind

- Only saved VLB and ELB log books are used. LMV log books and deleted log books are not in this report.
- Each row covers the whole period from From to To. For one day, set From and To to the same date.
- Log books saved without a work order are added up in the "Unassigned" row of their site.
- A log book that was not entered is left out, not counted as zero, so the totals come out lower. A log book entered twice is counted twice, so the totals come out higher.
- "Reset table" in the Actions menu of the table also puts From and To back to today's date.
- You see only the sites your login is allowed to see.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From and To to the period you are checking, for example the first and last day of a month.
2	Check that each site shows the work orders you expect. An unexpected work order or an "Unassigned" row means some log books carry a different work order or none.
3	To find those log books, choose the site in Site and open Vehicle Logbook Register and Equipment Logbook Register. Their WO / Contract column shows the work order of every book.
4	Compare Logbooks, Trips and KM of each work order with the site's own records for the period.
5	Read Running HRS and Utilisation % together with Logbooks, because log books not yet entered lower the totals.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
What does "Unassigned" mean?	Those log books were saved without a work order.
Can I see one work order only?	Yes. Choose it in Work order. The list shows the work orders found on the log books and scan cards of the chosen dates.
Why is Running HRS blank for a work order?	At least one log book in that row has no HMR reading.
