CALIBER MINING AND LOGISTICS LIMITED · PULSE-II

OT & Multiple Duties report

How to check and review it, step by step

For site in-charges, MIS staff and reviewers · Matches the system as of 10 November 2026 · The pictures use sample data, not real drivers

1. What this report tells you

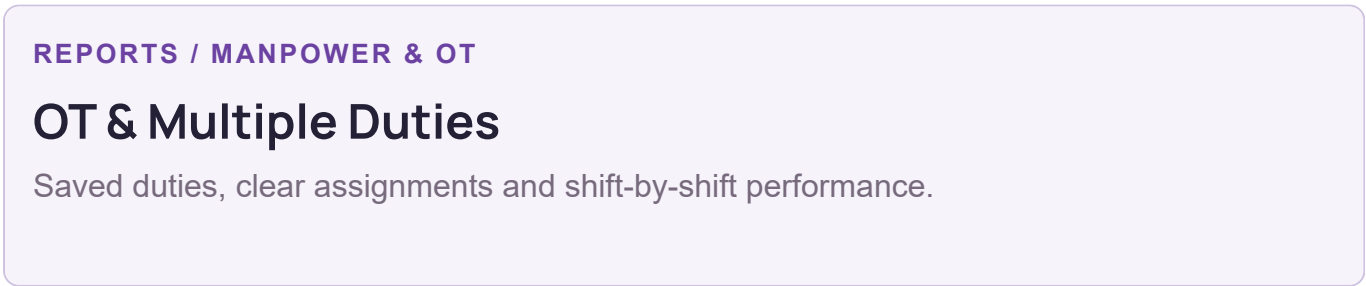

The report finds drivers and operators who worked more than one shift, from the log books already saved in Pulse-II: Vehicle Log Book (VLB), Equipment Log Book (ELB) and LMV Log Book. Each such finding is called a **case** and gets one of three colours.

Colour	What it means
Red	Two shifts back to back on the same day, all three shifts in one day, or Shift 3 followed by the next day's Shift 1.
Orange	Shift 1 and Shift 3 on the same day, with a shift of rest in between.
Brown	More than one duty, but the shift timing or pattern could not be confirmed from the Shift Master. Someone has to look at it. In the lists its reason starts with the word REVIEW.

> **Keep in mind.** The report reads saved cards only. A card still waiting in scanning, or a deleted card, is not counted. Shift times come from the Shift Master, not from attendance. HMR hours are machine hours, not payable OT hours.

2. Open the report and choose the dates

1. In the left menu open **Reports** → **Manpower & OT** → **OT & Multiple Duties**.
2. The report opens on the month so far: From is the 1st of the current month and To is today's date. In the filters at the top set **From** and **To** for the days you want. Press **Today** to come back to today's date.
3. You can choose up to 31 days at a time, starting from 1 November 2026.
4. To see one site only, choose it in **Site**. Its date-by-shift table and its drivers then open straight away.
5. Press **Refresh reports** to read the latest saved cards.

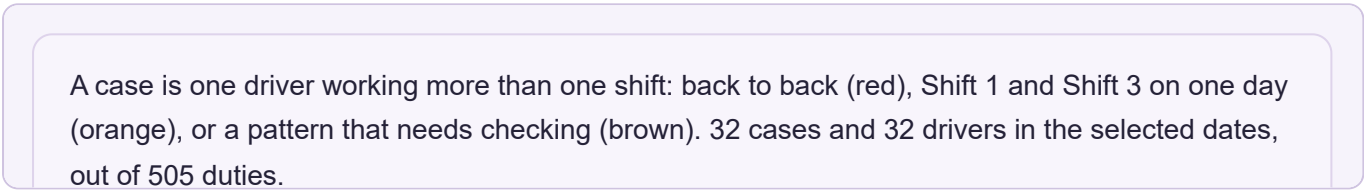

Picture 1. The report page. OT & Multiple Duties is the last of the five Manpower & OT tabs. *Sample data.*

Picture 2. The filters. The top line always shows the dates in use. Tick Auto-hide filters to tuck the selectors away. *Sample data.*

> **More room on screen.** Tick **Auto-hide filters** to fold the selectors into one line; they open when you point at the line. In the left menu, **Auto-hide menu** does the same for the menu. If the page looks old after an update, press **Ctrl + F5** once.

3. Choose the log book

Under the filters, one line says what is counted and how many cases and drivers were found in your dates. Below it is the log book selector.

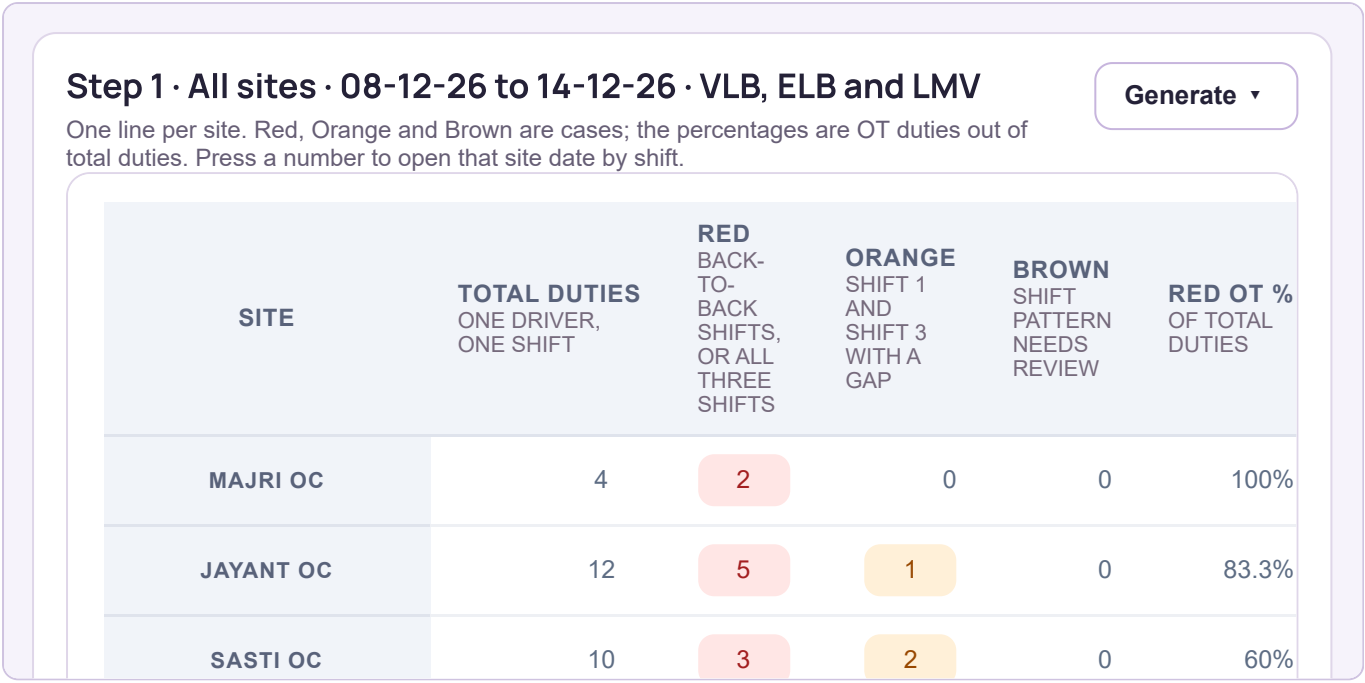

Picture 3. The line that says what is counted, and the log book selector. All log books is chosen at the start. *Sample data.*

- **All log books** counts the cases on VLB, ELB and LMV together. Press **VLB**, **ELB** or **LMV** to see only the cases that include that log book. Every number on the page follows the selector.
- A case done on two log books, for example a tipper in Shift 1 and an LMV in Shift 2, is counted under both. So VLB + ELB + LMV can be more than All log books. This is correct.

4. Step 1: the site table

The page opens in five steps, each one under the last: all sites, one site date by shift, one date and shift by equipment category, the drivers, and one driver’s history. Step 1 has one line for every site assigned to your login, and an **All sites** line at the bottom. The sites run from the highest **Red OT %** to the lowest, so the site that needs attention first is on top; a site with no duty comes last.

Picture 4. Step 1. One line per site: total duties, red, orange and brown cases, the share of red and orange duties, and the number of drivers. Every number can be pressed. *Sample data.*

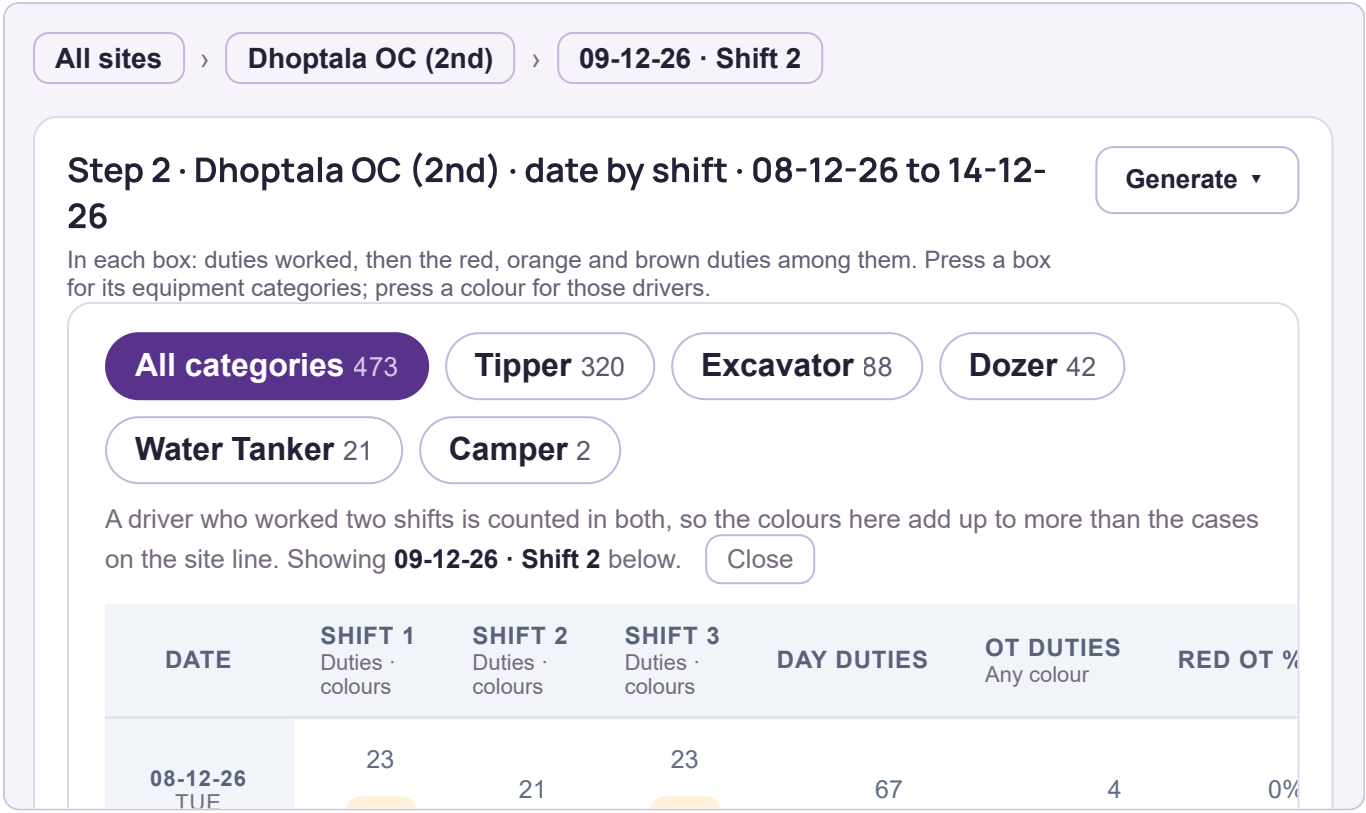

Column	What it shows
Total duties	All duties saved at the site in your dates. One duty is one driver in one shift on one date, with or without OT.
Red, Orange, Brown	The number of **cases** of that colour at the site. A driver who worked Shift 1 and Shift 2 is one case.
Red OT %, Orange OT %	Out of every 100 duties at the site, how many were part of a red case, and how many of an orange case.
Drivers	How many different drivers at the site have a case of any colour.

- **Press any number on a site's line** to open that site date by shift (Step 2). Press it again to close the site.
- A line with all zeros means the site was checked and nothing was found.
- The **All sites** line opens every site together.

> **Cases and duties.** One case is made of two or three duties. The site table counts cases. From Step 2 downwards every number is a duty, so the red duties there are about double the red cases here. Both are correct. The percentages are always on duties.

5. Step 2: the site, date by shift

When a site is open, a second table shows it day by day and shift by shift. It has one line for every date you chose, and an **All dates** line at the bottom when you chose more than one date. A line above the tables shows where you are, for example **All sites › Dhoptala OC (2nd) › 09-12-26 · Shift 2**; press any part of it to step back. The violet **Back** button at the start of that line goes back one level; the round back arrow at the top of the page does the same.

Picture 5. Step 2. The opened site, date by shift. In each box the first number is the duties and the coloured numbers are the red, orange and brown duties. Here the box of 09-12-26, Shift 2 has been pressed. *Sample data.*

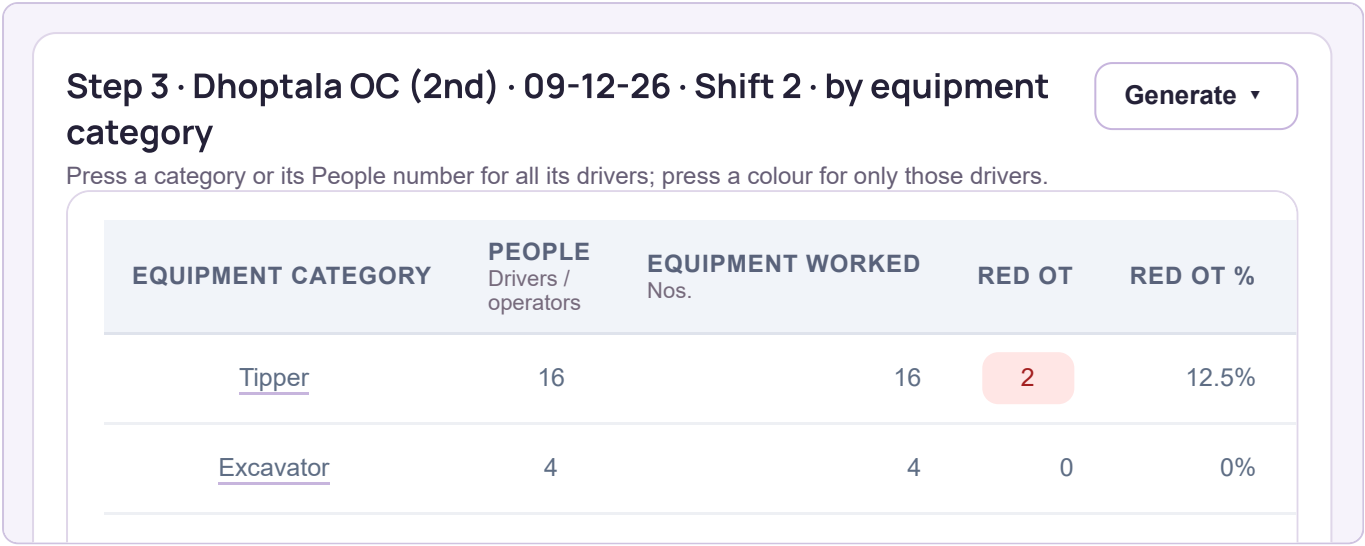

Column	What it shows
Date	The duty date, with the day of the week.
Shift 1, Shift 2, Shift 3	The first number is the duties worked in that shift. The coloured numbers after it are the red, orange and brown duties among them. 0 means no duty was saved.
Day duties	All duties of that date, of the three shifts together.
OT duties	The duties of that date that carry any colour.
Red OT %, Orange OT %	Red duties of the day out of the day's duties, and the same for orange.

A driver who worked two shifts is counted in both. A red case of Shift 1 with Shift 2 shows one red duty under Shift 1 and one under Shift 2. Shift 3 followed by the next day's Shift 1 shows red under Shift 3 of the first day and under Shift 1 of the next day.

- The buttons above the table are the **equipment categories** worked at the site, with their duties. Press one, for example Tipper, to see the table for that category only. **All categories** brings everything back.
- **Press the first number in a box** to open that date and shift by equipment category (Step 3).
- **Press a coloured number** to go straight to the drivers of that colour in that date and shift (Step 4).
- Press the number under **Day duties** for the whole day, or a number on the **All dates** line for all the dates together.

6. Step 3: by equipment category

The third table shows the date and shift you pressed, one line for each equipment category, and an **All categories** line at the bottom.

Picture 6. Step 3. That date and shift by equipment category: people, machines, red and orange OT with their percentages. *Sample data.*

Column	What it shows
Equipment category	The equipment group of the machine worked, from the Equipment master: Tipper, Excavator, Dozer and so on.
People	The number of drivers and operators who worked on that category.
Equipment worked	The number of different vehicles or machines of that category that ran.
Red OT, Red OT %	The people on a red case, and their share of that category's people.
Orange OT, Orange OT %	The same for orange.
Brown	Duties whose pattern has to be reviewed.
Total OT, Total OT %	Red, orange and brown together, and their share.

- **Press a category name or its People number** to list all its drivers (Step 4). **Press a coloured number** to list only those drivers.
- For a whole day or for all dates a **Duties** column is added. People then means different persons, and the percentages are on duties, because one person works many duties.
- A driver who worked on two machines in one shift is counted on the machine with the most HMR hours.
- **Group missing in master** means the machine has no equipment group in the Equipment master. Get the master corrected.

7. Step 4: the drivers

The drivers list has one row for each duty in the category you pressed. Drivers on OT come first: red, then orange, then brown, then the normal duties in white.

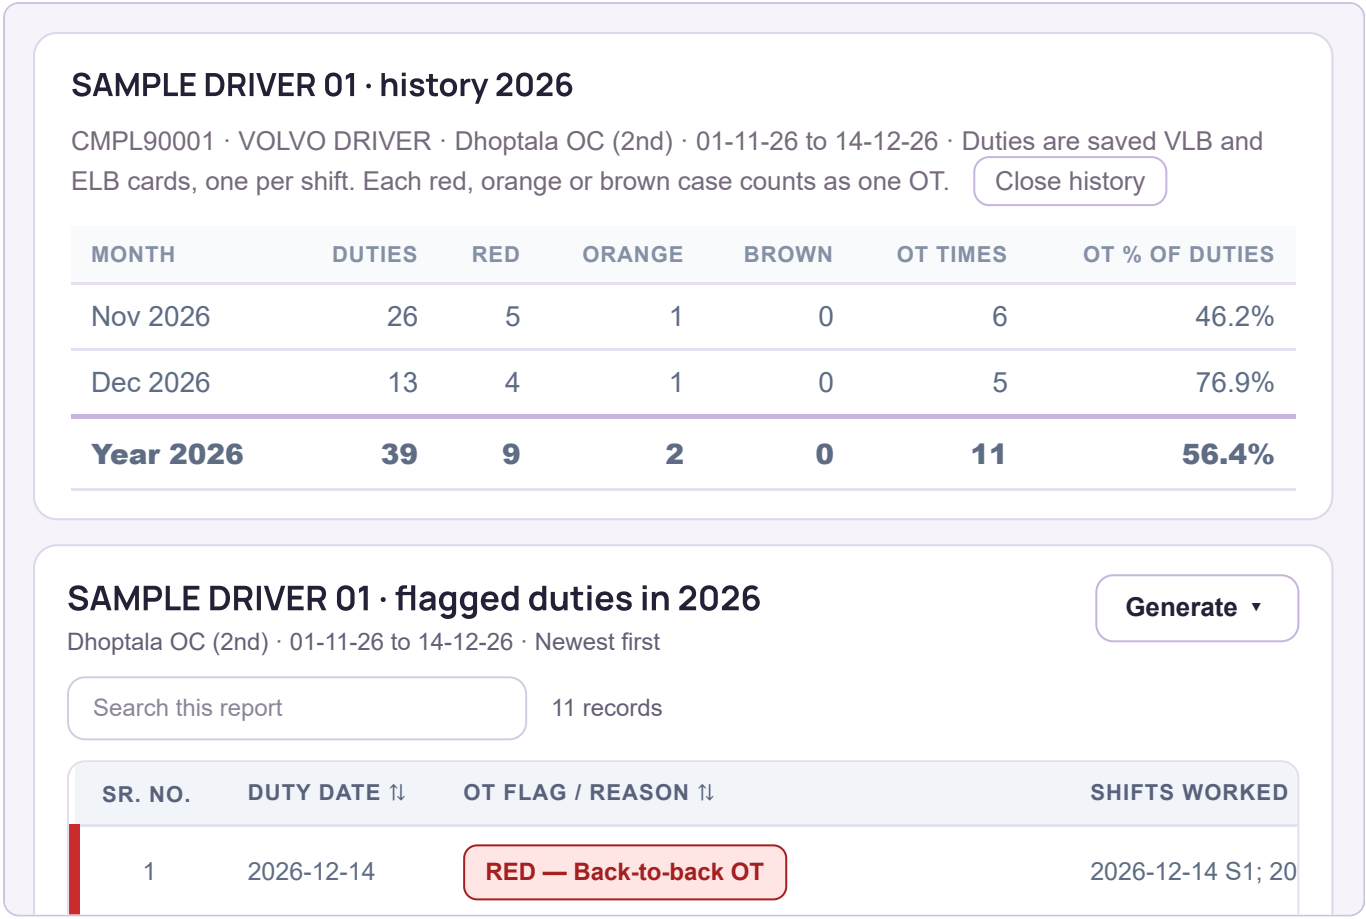

Picture 7. Step 4. The drivers of the Tipper category in that shift, OT duties first, with red and orange counts for the month and for the year. *Sample data.*

Column	What it shows
Driver category	The driver's current designation in the Employee master. "Category not in Employee master" means none is saved; get the Employee master corrected.
Door / equipment, Make / model, Log book	The machine worked and the log book the card was saved in.
Other shift worked	For an OT duty, the other shift of the same case, for example "Also worked S3".
OT colour / reason	The colour and the exact reason, or "Normal duty".
HMR hours, Completed VLB trips	Machine hours and trips of this shift, from the saved cards.
Red and Orange in the month, Red and Orange in the year	How many red cases and orange cases the driver has in the calendar month and year of your To date, at this site. Records start on 1 November 2026.
Saved cards	The card numbers behind the duty.

> **Reading the month and year counts.** While the counts are being read the cells say "Checking…". They never show 0 before the answer has come. In a list opened from the All sites line the cells say "Press the name": the counts are read for one site at a time, when you press a driver's name.

8. Step 5: one driver's history

Press the driver's name. His history for the year opens below the list.

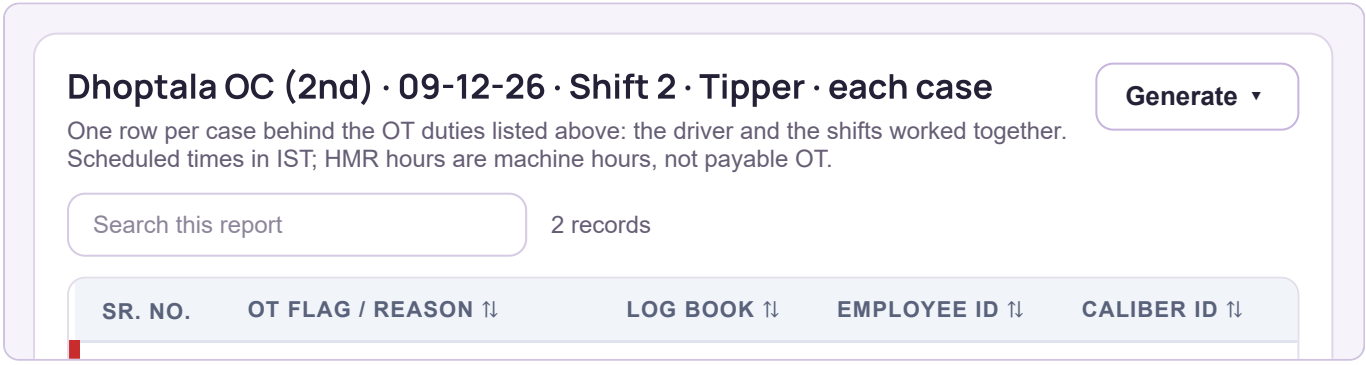

Picture 8. Step 5. Press a driver's name to open his history: duties and OT month by month, then every flagged duty, newest first. *Sample data.*

- The first table goes month by month: **Duties** (saved VLB and ELB cards, one per shift), then Red, Orange, Brown and **OT times**, with the year total in the last row.
- **OT % of duties** is the duties that were part of a case, out of the duties worked in that month.
- The second table lists every case of the year, newest first, with the shifts worked and the saved card numbers.
- Press the name again, or **Close history**, to close it.

9. Each case

Below the drivers list, the table **each case** lists in full the cases behind the OT duties shown in the list.

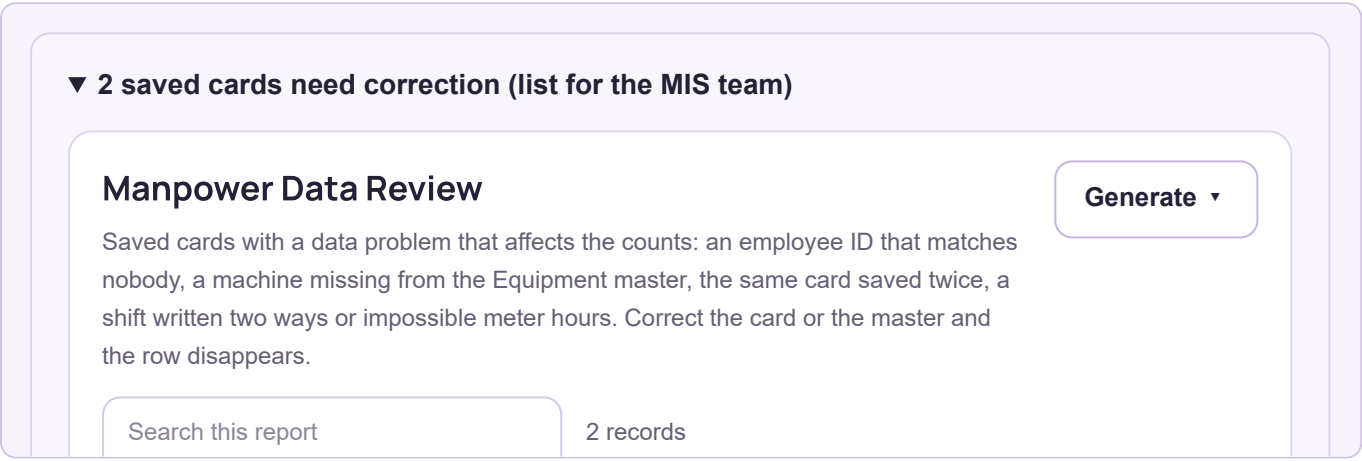

Picture 9. Each case behind the listed OT duties: one row per case, with the shifts worked and the saved cards behind it. *Sample data.*

Column	How to use it
OT flag / reason	The colour and the exact reason.
Log book	VLB, ELB, LMV, or two of them joined, such as VLB + LMV.
Shifts worked, scheduled start / end, gap	Which shifts, the Shift Master timings, and the rest between the duties.
Saved cards, source batches	The card numbers and batches the case came from. Use these to open and check the original entry.
Remarks / review	Anything doubtful in the cards, such as a missing meter reading.

10. Cards that need correction

Near the bottom of the page one line reads **"… saved cards need correction (list for the MIS team)"**. Press it to open **Manpower Data Review**: saved cards that could not be counted properly. Until they are corrected, the counts above may be short. The line is not shown when no card needs correction.

Picture 10. The line "saved cards need correction", opened: saved cards that could not be counted properly. *Sample data.*

What to correct, as shown	What to do
Employee ID is missing or cannot be resolved	The card has no valid driver. Correct the Employee ID on the saved card.
Equipment master match is missing	The door number on the card is not in the Equipment master. Correct the card or the master.
Shift schedule is missing or ambiguous	The Shift Master has no clear timing for that site and shift. Get the Shift Master corrected.
Possible repeated scan / card	The same card appears to be saved twice. Compare the two cards and remove the wrong one.

11. Download, print and search

- Every table on the page has a **Generate** button: the site table, the date-by-shift table, the equipment category table, the drivers list, the driver's history and the case table. Choose **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains all rows of that table, not only the ones on screen.
- In the drivers list and the case table, type in **Search this report** to find a driver, door number or card.
- Press a column heading there to sort by that column.

12. Daily review routine

Step	Do this
1	Open the report and set the dates to the day or days you are reviewing.
2	Leave the selector on All log books. In the site table read Red OT % and Orange OT % first, then the Red, Orange and Brown cases.
3	Press a number of each site that has OT. The site opens date by shift. Read which dates and shifts carry the red and orange duties and how high their percentages are.
4	Press the box of a date and shift. Read which equipment category carries the OT and its percentage.
5	Press the red number of that category. For each driver read Red and Orange in the month and in the year. Press the name of anyone who repeats and read his history.
6	Before reporting a case, check it in the table “each case”: shifts worked and saved cards. A wrong driver ID or a wrong shift on a card creates a false OT. Get such cards corrected in the log book.
7	Open the line “saved cards need correction” and get every listed card or master entry corrected.
8	Use Generate to download any of the tables for your record or report.

> **This guide shows how to find and verify the cases.** What action to take on a red or orange case is as instructed by management.

13. Common questions

Question	Answer
A driver did OT but is not in the report.	Check that both cards are saved (not pending in scanning), carry the same Employee ID, and are at the same site. Open the line “saved cards need correction” and look for his cards.
The numbers changed since the morning.	More cards were saved, corrected or deleted. Press **Refresh reports** for the latest position.
VLB + ELB + LMV is more than All log books.	A duty or case done on two log books is counted under both. All log books counts it once.
The red numbers in the date table add up to more than Red on the site line.	The site line counts cases. The date table counts duties, and one case is two or three duties, one under each shift worked.
How is Red OT % worked out?	Red duties divided by all duties of the same line, multiplied by 100. A line with no duty shows “—”.
People in a category is less than its Duties.	You opened a whole day or all dates. One person worked several duties; People counts him once.
Red in the year is the same as Red in the month.	That happens in the first month of records, or when all his red cases of the year are in this month.
The month and year cells say “Press the name”.	You opened the All sites line. Press the driver’s name: the counts of his site are then read.
A driver works at two sites.	Counts are for one site at a time. In the All sites list he has one row for each site.
I do not see a site.	You see only the sites assigned to your login. Ask the administrator.
