CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · MANPOWER & OT

Manpower by Category

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 10 November 2026

1. What this report shows

Shows how many machines and how many employees worked, step by step: first every site, then one site date by shift, then one date and shift by equipment category. Below the steps it lists the counts by category, group, make and model and every saved VLB and ELB card they come from, for whatever step is open. A site in-charge or MIS clerk uses it to see how the fleet was manned and to find cards whose employee or equipment details need checking.

> **One row.** In “Manpower by Category, Make & Model” one row is one duty date, site, shift, category, equipment group, make and model. In “Vehicle & Employee Assignments” one row is one saved VLB or ELB card.

2. Open the report and choose what to see

In the left menu open **Reports** → **Manpower & OT** → **Manpower by Category**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last duty date of the report. Both open on today’s date. A date before 1 November 2026 cannot be chosen, To cannot be earlier than From, and the range can cover at most 31 days. Outside these limits nothing loads and the screen says “Choose a valid range of up to 31 days, starting on or after 1 November 2026.”
Site	Keeps only the cards of one site. “All” means every site assigned to your login. Changing the site sets Saved batch and Door / equipment back to “All”.
Shift	Keeps only the cards of one shift. The list shows the shift codes found in the loaded records, for example S1, S2, S3.
Saved batch	Keeps only the cards saved in one batch. The list holds the batches dated within From and To and the batches of the loaded cards. A batch with no saved card can be chosen, but it gives no count.
Employee	Keeps only the cards whose Employee ID was matched to that employee. Each entry reads Employee ID · name, for example “CMPL90001 · SAMPLE DRIVER 01”. Cards with an unmatched ID are not shown while an employee is chosen.
Door / equipment	Keeps only the cards of one door number, for example V9001.
Today	Button. Sets From and To to today’s date. The other selections stay.
Clear selections	Button. Sets Site, Shift, Saved batch, Employee and Door / equipment back to “All”. The dates stay.

Auto-hide filters	Tick box. When ticked, the selectors are tucked away and only a bar with the current dates, site and shift stays on screen. Move the mouse over the bar, or press it, to open the selectors; they close when the mouse leaves. The choice is remembered in this browser.
Refresh reports	Button at the top right. Reads the saved records again with the same selections. It cannot be pressed while a load is running.

3. What is on the screen

On the screen	What it shows
REPORTS / MANPOWER & OT	The page heading, with the title “Manpower by Category” under it. The next line reads “Saved duties, clear assignments and shift-by-shift performance.”
Manpower by Category · Shift Performance · Shift Attendance Equipment Wise · OT & Multiple Duties	The tab row. Press a name to open that view. The dates and selections stay the same when you move between these four tabs.
Bar above the selectors	Shows the From and To dates in use, the site (or “All assigned sites”), the shift (or “All shifts”) and how many of Saved batch, Employee and Door / equipment are set, for example “2 more selections”. The bar can be pressed only when “Auto-hide filters” is ticked.
Loading saved records and checking shift patterns…	Shown while the report is being read. The tables appear when the reading is over.
Error message	If the report cannot be read, the reason is shown in place of the tables. For example, when the chosen dates hold more than 50,000 saved cards the screen says “This range contains too many saved cards. Select a shorter date range.”
Line under the selectors	Repeats the dates, site and shift in use, then “Saved records only” and “Updated … IST”, the time at which this report was read.
Distinct assets	Count card. Number of different machines on the selected cards. A machine is one door number at one site. Cards left out of totals, and cards whose door number does not fit exactly one machine in the Equipment master, are not counted.
Distinct employees	Count card. Number of different employees matched on the selected cards. Cards left out of totals, and cards whose Employee ID was not matched, add nothing.
Employee shift duties	Count card. Number of rows that the Shift Performance tab shows for the same selections: one for each employee, site, date and shift.
Review items	Count card. Number of rows in the “Manpower Data Review” table at the bottom.

Step 1 · All sites	The first table: one line for every site assigned to your login, and an “All sites” line. Vehicles / equipment is the number of different machines, Employees the number of different employees, Duties one employee in one shift on one date, Saved cards the cards read. The All sites line equals the count cards above. Press any number on a line to open that site; press it again to close it. Its Generate button downloads the table.
Step 2 · date by shift	Opens under Step 1 when a site is pressed. One line for every date chosen, and an “All dates” line when more than one date is chosen. Each shift box shows the duties of that shift and, under it, the machines that worked. Then Day duties, Vehicles / equipment, Employees and Saved cards for the whole day. Press a box to open Step 3 for that date and shift; press the Day duties number for the whole day, or a number on the All dates line for every date.
Step 3 · by equipment category	Opens under Step 2 when a box is pressed. One line for each equipment category (the equipment group in the Equipment master, such as Volvo Tippers or Haulpak Dumper) with its machines, employees, duties and saved cards, and an “All categories” line. Press a category or one of its numbers: the two tables below then show only that category.
Line above the steps	Shows where you are, for example “All sites › Sasti OC › 05-11-26 · Shift 1 › Volvo Tippers”. Press any part of it to step back to that level.
Manpower by Category, Make & Model	The counts by category, group, make and model, for what is open in the steps above: every site at first, then the opened site, date and shift, and category. The opened selection is added to its title. The line under the title repeats the selections and adds “Distinct assets and employees within each category”. If nothing matches it says “No saved asset assignments in this selection. An empty batch has no manpower count.”
Vehicle & Employee Assignments	The saved cards, one by one, for what is open in the steps above. The opened selection is added to its title. If nothing matches it says “No saved assignments match these selections.”
Manpower Data Review	The table at the bottom. It lists every problem found on the selected cards, one row for each problem, so that it can be corrected. If there is none it says “No card needs correction in these selections.”
Sources and calculation rules	Press to open the written rules the report follows. The last line says that manpower requirements, shortages and relief availability are reserved for a later phase.

4. The columns

Column	Meaning
Manpower by Category, Make & Model · Duty date	Book date of the cards counted in the row, written as year-month-day.
Manpower by Category, Make & Model · Site	Site of those cards.
Manpower by Category, Make & Model · Shift	Shift code of those cards, for example S1, S2 or S3.

Manpower by Category, Make & Model · Category	Category of the machine in the Equipment master. “Unresolved category” means the master has no category for it.
Manpower by Category, Make & Model · Equipment group	Group of the machine in the Equipment master. “Unresolved group” means the master has no group for it.
Manpower by Category, Make & Model · Make	Make name from the Equipment master. “Unresolved make” means it is blank. “Unresolved make code” followed by a number means the master holds only a number, with no name.
Manpower by Category, Make & Model · Model	Model name from the Equipment master, with the same “Unresolved model” wording when it is blank or only a number.
Manpower by Category, Make & Model · Distinct vehicles / equipment	Number of different machines in the row. A machine is one door number at one site, so two cards of the same door count once.
Manpower by Category, Make & Model · Distinct employees	Number of different matched employees on the row’s cards. An employee who changed equipment is counted in each row he worked in, so do not add this column down the table.
Manpower by Category, Make & Model · Unresolved assignment records	Number of cards in the row whose Employee ID could not be matched to the employee master.
Manpower by Category, Make & Model · Door numbers	Door numbers of the row’s cards, separated by “;”.
Manpower by Category, Make & Model · Source batches	Names of the batches in which the row’s cards were saved. Blank when the cards are in no batch.
Vehicle & Employee Assignments · Duty date	Book date of the card.
Vehicle & Employee Assignments · Site	Site of the card.
Vehicle & Employee Assignments · Shift	Shift code of the card. “Unresolved” means no shift could be read from the card, or its shift labels disagree.
Vehicle & Employee Assignments · Door / equipment	Door number saved on the card. If the card has none, the door number of the matched machine in the Equipment master.
Vehicle & Employee Assignments · Category	Category of the machine in the Equipment master. “Unresolved category” when the card has no Equipment master match or the master has no category.
Vehicle & Employee Assignments · Equipment group	Group of the machine in the Equipment master. “Unresolved group” when it is not available.
Vehicle & Employee Assignments · Make	Make name from the Equipment master. “Unresolved make” when it is not available; “Unresolved make code” with a number when the master holds only a number.

Vehicle & Employee Assignments · Model	Model name from the Equipment master, with the same “Unresolved model” wording.
Vehicle & Employee Assignments · Employee ID	Employee ID from the employee master when the card was matched. Otherwise the ID saved on the card.
Vehicle & Employee Assignments · Caliber ID	Caliber ID mapped to that employee in the master. Blank when the card was not matched.
Vehicle & Employee Assignments · Driver / operator	Name from the employee master when the card was matched. Otherwise the name saved on the card.
Vehicle & Employee Assignments · Assignment	“Matched employee ID” when the ID on the card was matched to one employee. “Needs identity review” when the ID is missing, not found, in conflict with the linked employee, or fits more than one employee. “Needs record review” when the card is left out of totals because its saved date or site disagrees with the log book, or its shift labels disagree.
Vehicle & Employee Assignments · Source batches	Names of the batches holding the card. “Saved VLB (no site batch)” or “Saved ELB (no site batch)” when it is in no batch.
Vehicle & Employee Assignments · Batch status	“Open” or “Closed” for the batch of the card. “Saved scan” when the card has only a scan batch. “Saved” when it has no batch. A card in an open batch can still change.
Vehicle & Employee Assignments · Saved card	Book number of the saved card.
Vehicle & Employee Assignments · Remarks / review	Every review reason found on the card, then the remark saved on the card, separated by “;”.
Manpower Data Review · Duty date	Book date of the card that has the problem.
Manpower Data Review · Site	Site of that card.
Manpower Data Review · Shift	Shift code of that card.
Manpower Data Review · Door / equipment	Door number of that card.
Manpower Data Review · Employee ID	Matched Employee ID, or the ID saved on the card when it was not matched.
Manpower Data Review · Driver / operator	Name of the driver or operator on that card.
Manpower Data Review · Saved card	Book number of the card. Use it to find the card.
Manpower Data Review · Log book	VLB or ELB. LMV items are shown only on OT & Multiple Duties.
Manpower Data Review · Source batches	Names of the batches holding the card, or “Saved VLB (no site batch)” / “Saved ELB (no site batch)”.

Manpower Data Review · What to correct	The problem in words. Examples: “Employee ID is missing or cannot be resolved to an employee master.”, “Equipment master match is missing.”, “Make is missing in Equipment master.”, “Possible repeated scan/card omitted from totals; compare the source cards.”

5. Keep in mind

- Only saved VLB and ELB log books dated 1 November 2026 or later are read. Pending scans and deleted records are excluded. LMV log books are used only by OT & Multiple Duties.
- Counts are distinct inside each row. An employee who changed equipment appears in more than one row, so the Distinct employees column cannot be added to get a total; the “Distinct employees” card gives the total for the selection.
- A repeated record or a possible repeated scan/card is counted once. The extra copy is left out of both tables and listed in Manpower Data Review.
- A card stays in Vehicle & Employee Assignments but is left out of the first table when it is marked “Needs record review”, has no Equipment master match, has no door number, or its door number fits more than one machine at that site.
- Category, group, make and model are read from the current Equipment master. A change in the master also changes how earlier dates are shown.
- Only sites assigned to your login are loaded. Cards in an open batch are included and can still change.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From, To and Site. Read the line under the selectors to confirm the selections and the “Updated” time. Press “Refresh reports” if cards were saved after that time.
2	Read the four count cards, then Step 1. Press a site, then a date and shift box, then an equipment category, to see where the machines and employees were. If “Review items” is not 0, open “Manpower Data Review” at the bottom first.
3	In “Manpower by Category, Make & Model”, compare Distinct vehicles / equipment with the Door numbers listed in the same row.
4	Where Unresolved assignment records is more than 0, find those cards in “Vehicle & Employee Assignments” (Assignment shows “Needs identity review”) and compare the Employee ID with the paper card.
5	Search for “Unresolved” to find machines with a missing category, group, make or model, and check those door numbers in the Equipment master.
6	Look at Batch status. Rows from an “Open” batch can change, so read the report again after the batch is closed.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why is the sum of Distinct employees in the table more than the “Distinct employees” card?	The table counts an employee once in every row he worked in: each date, shift, category, make and model. The card counts each employee once for the whole selection.
A card was saved but I cannot find it here. Why?	Check From, To, Site and Shift, then press “Refresh reports”. Pending scans, deleted records and LMV log books are not read. A repeated copy of a card is left out and listed in “Manpower Data Review”.
What does “Unresolved make code” with a number mean?	The Equipment master holds only a number for the make of that machine, with no name. The same wording is used for the model. The card is also listed in “Manpower Data Review”.
Why is a card in “Vehicle & Employee Assignments” but not counted in the first table?	The first table counts only cards that are included in totals and whose door number fits exactly one machine in the Equipment master. Other cards stay in the second table and in “Manpower Data Review” with the reason.
