CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · UTILISATION & EXCEPTIONS

Missing / Duplicate Logbooks

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

Finds two things in the chosen dates: a door and shift that has more than one saved log book (Duplicate), and a door and shift that has no saved log book at all (Potential missing). It compares the saved VLB and ELB log books with the current Equipment master and Shift Master. A site in-charge or MIS clerk uses it as a list of entries to verify against the operating roster.

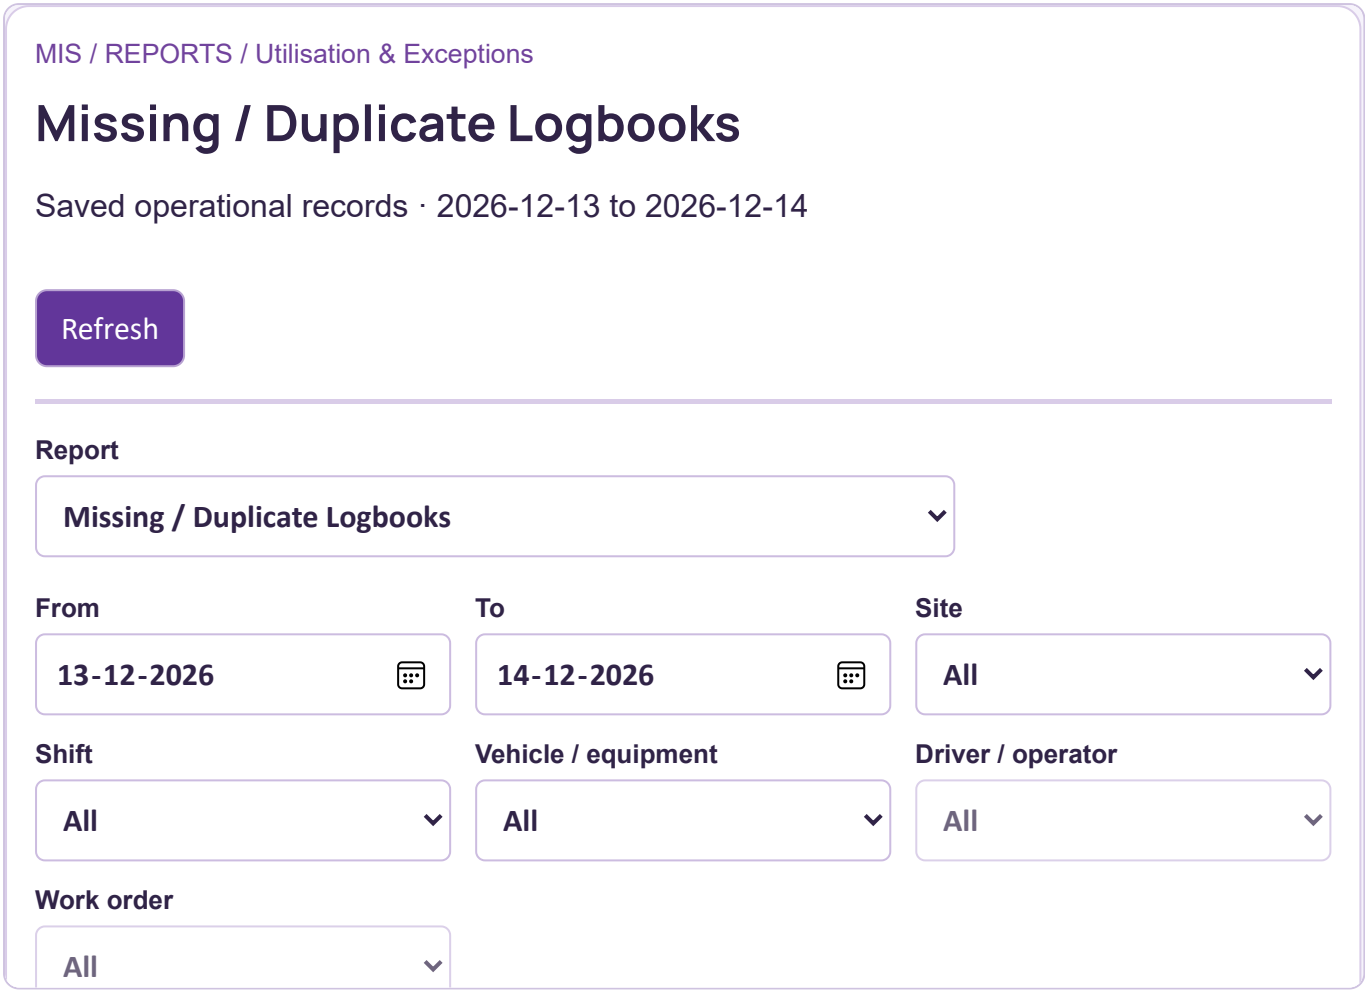

> **One row.** One row is either one date, site, door and shift that has two or more saved log books (Finding is "Duplicate"), or one date, door and shift for which no saved log book was found (Finding is "Potential missing").

2. Open the report and choose what to see

In the left menu open **Reports** → **Utilisation & Exceptions** → **Missing / Duplicate Logbooks**. Then set the selectors described below.

Selector or button	What it does
From	First date to check. It opens on today's date (India time). Dates before 1 November 2026 are not accepted.
To	Last date to check. Every day from From to To is checked for every door and shift. It cannot be earlier than From, and From to To can cover at most 366 days. If the dates are not valid the screen shows "Choose a valid date range of at most 366 days." and no report is shown. Keep in mind: Actions → Reset table also puts From and To back to today.
Site	Checks only log books of that site, and only doors whose current site in the Equipment master is that site. "All" means every site assigned to your login. Once a site is chosen, the Shift and Vehicle / equipment lists show only that site's entries.
Shift	Checks only that shift.
Vehicle / equipment	Checks only that door number.
Driver / operator	Disabled (greyed out) on this report. A choice made on another report is ignored here.
Work order	Disabled (greyed out) on this report. A choice made on another report is ignored here.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Picker at the top of the screen. It lists all reports under their groups; choosing a name opens that report.
Refresh	Loads the saved records for the chosen dates again. Press it after log books have been saved or deleted. Changing Site, Shift or Vehicle / equipment does not need Refresh.
Filters:	One line showing what is selected in Site, Shift and Vehicle / equipment, written as "site: …", "shift: …" and "asset: …". With nothing selected it reads "All sites, assets, shifts and employees". Site appears by name; Shift and Vehicle / equipment appear as the system's internal number. Driver / operator and Work order never appear here.
logbooks	Number of saved VLB and ELB log books that match the dates, Site, Shift and Vehicle / equipment.
assets	Number of different doors on those log books.
trips	Total trips on those log books.
report rows	Number of findings (Duplicate and Potential missing together). This is the number of rows in the table below.

A potential missing logbook has no card, so no employee can be shown for it. Potential missing assumes every current asset should report on every current site shift, including non-working days. Historical transfers and operating rosters are unavailable. Employee and work-order filters do not apply to this report.	Notice shown above the table on this report. It states what the Potential missing check assumes and what it cannot know.

4. The columns

Column	Meaning
Date	Date of the duplicate log books, or the date for which no log book was found.
Site	Site of the log books. For Potential missing, the door's current site in the Equipment master.
Door NO	Door number.
Shift	Shift name.
Caliber ID	For Duplicate: Employee IDs of all people on the duplicate log books, each one once, separated by commas. Empty ("—") for Potential missing.
Employee	For Duplicate: names of the same people, in the same order as Caliber ID. Empty ("—") for Potential missing, because there is no card to take a name from.
Finding	"Duplicate" or "Potential missing".
Details	For Duplicate: the book numbers of the log books, separated by commas. For Potential missing: "Verify operating roster".

5. Keep in mind

- Potential missing expects every door in the current Equipment master to have a log book on every day, for every shift listed for its site in the Shift Master. It does not know weekly offs, breakdowns, idle doors or which shift a door was planned for.
- If a site has several shifts in the Shift Master, each door is checked against every one of them. A door that works only some of those shifts is listed as Potential missing for the others.
- The door's site is its current location in the Equipment master. A door that moved sites during the period is checked against its present site for all dates.
- LMV log books are not read by this screen, so a door entered only in the LMV Log Book is still listed as Potential missing.
- Duplicate only means that more than one saved log book exists for the same date, site, door and shift. The report does not say which one is correct.
- The list grows with days × doors × shifts. Choose one site and a short date range to keep it readable.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Choose one Site and a short date range, for example one day.
2	Type "Duplicate" in Search this report. For each row, open the book numbers shown in Details in the Vehicle Logbook Register or Equipment Logbook Register and compare them.
3	Type "Potential missing" in Search this report. For each row, check the operating roster to see whether that door was working in that shift on that date.
4	Where a log book should exist, check in Scan Review & Reconciliation whether its card is still waiting or has failed.
5	After log books are saved or corrected, press Refresh and confirm that the row is gone.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why are Driver / operator and Work order greyed out?	This report checks doors and shifts. A missing log book has no driver or work order, so the screen ignores these two selectors here.
Why are Caliber ID and Employee empty on a Potential missing row?	No log book exists for that row, so there is no card to take the employee from.
A door that works only one shift is listed as missing for the other shift. Is that an error?	The report does not know the roster. It lists every shift of the site for every door. Verify the row against the operating roster.
Does Duplicate mean one of the log books is wrong?	Not by itself. It only shows that more than one log book exists for the same date, site, door and shift. Compare the book numbers shown in Details.
