CALIBER MINING AND LOGISTICS LIMITED · PULSE-II

OT & Multiple Duties report

How to check and review it, step by step

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The pictures use sample data, not real drivers

1. What this report tells you

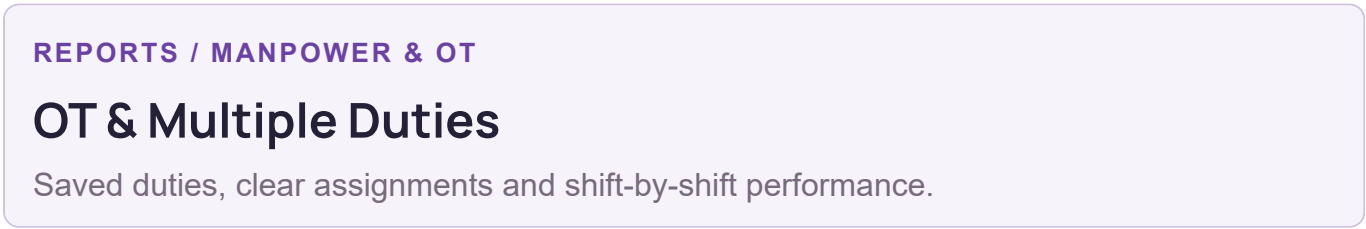

The report finds drivers and operators who worked more than one shift, from the log books already saved in Pulse-II: Vehicle Log Book (VLB), Equipment Log Book (ELB) and LMV Log Book. Each such case is called a **flagged duty** and gets one of three colours.

Colour	What it means
RED	Two shifts back to back on the same day, all three shifts in one day, or Shift 3 followed by the next day's Shift 1.
ORANGE	Shift 1 and Shift 3 on the same day, with a shift of rest in between.
REVIEW	More than one duty, but the shift timing or pattern could not be confirmed from the Shift Master. Someone has to look at it.

> **Keep in mind.** The report reads saved cards only. A card still waiting in scanning, or a deleted card, is not counted. Shift times come from the Shift Master, not from attendance. HMR hours are machine hours, not payable OT hours.

2. Open the report and choose the dates

1. In the left menu open **Reports → Manpower & OT → OT & Multiple Duties**.
2. The report opens on today's date. In the filters at the top set **From** and **To** for the days you want. Press **Today** to come back to today's date.
3. You can choose up to 31 days at a time, starting from 1 November 2026.
4. Press **Refresh reports** to read the latest saved cards.

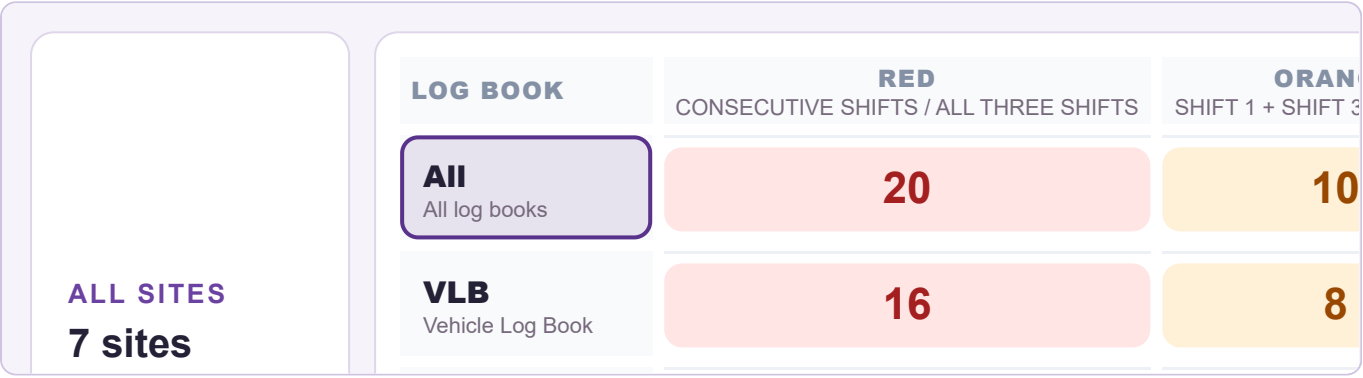

Picture 1. The report page. OT & Multiple Duties is the last of the four Manpower & OT tabs. *Sample data.*

Picture 2. The filters. The top line always shows the dates in use. Tick Auto-hide filters to tuck the selectors away. *Sample data.*

> **More room on screen.** Tick **Auto-hide filters** to fold the selectors into one line; they open when you point at the line. In the left menu, **Auto-hide menu** does the same for the menu. If the page looks old after an update, press **Ctrl + F5** once.

3. Read the summary grid

The grid at the top counts the flagged duties for the dates you chose. The first row is all log books together. The next three rows are VLB, ELB and LMV.

Picture 3. The summary grid: one row for all log books, then VLB, ELB and LMV. Every number can be pressed. *Sample data.*

- **Press a row name** (All, VLB, ELB or LMV) to see only that log book on the whole page.
- **Press a number** to list those drivers together with their earlier red and orange duties (see step 8).
- A driver who worked on two log books in one flagged duty, for example a tipper in Shift 1 and an LMV in Shift 2, is counted under both. So VLB + ELB + LMV can be more than the All row. This is correct.

4. Go site by site

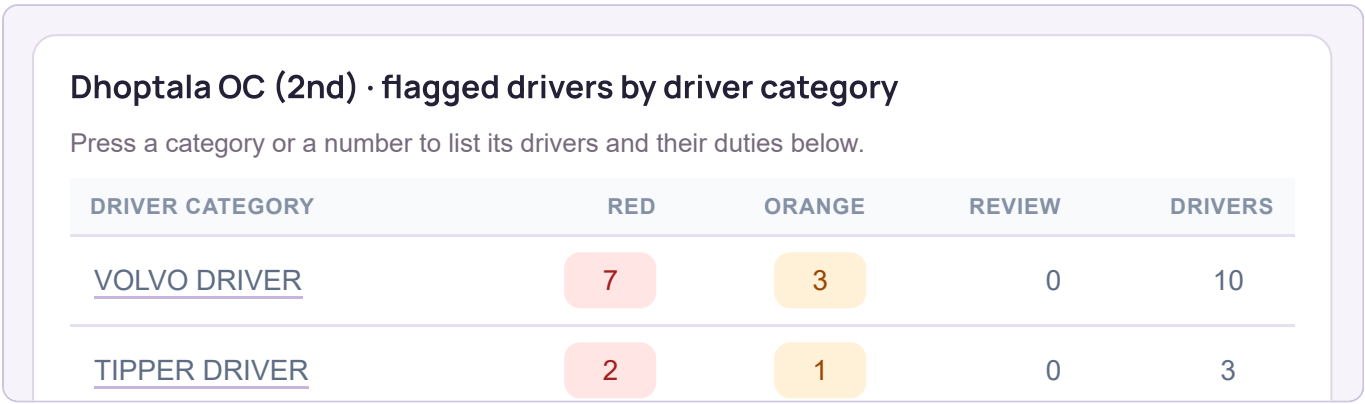

Below the grid there is one card for every site assigned to your login. Each card shows the red, orange and review counts for VLB, ELB and LMV.

Picture 4. One card per site, with red, orange and review counts for each log book. Press a card to open the site. *Sample data.*

- **Press a card** to open that site. The grid at the top then shows that site only.
- Press ← **All sites**, or the same card again, to go back.
- A card with all zeros means the site was checked and nothing was found.

5. Inside a site: driver categories

When a site is open, a table shows the flagged drivers by driver category. The category is the driver's current designation in the Employee master.

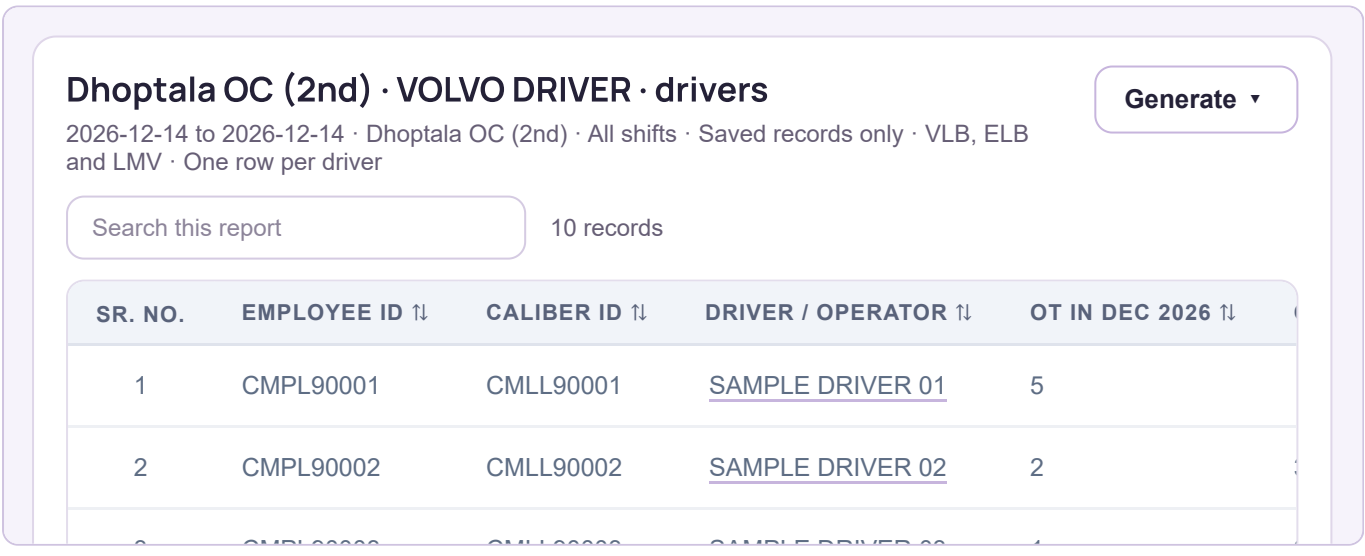

Picture 5. Inside a site: flagged drivers by driver category. Press a category name or a number. *Sample data.*

- **Press a category name**, or the number under Drivers, to list every flagged driver of that category.
- **Press a red, orange or review number** to list only that colour within the category.
- Press the same choice again, or **Show all categories**, to clear it.
- "Category not in Employee master" means the driver has no designation saved. Get the Employee master corrected.

6. The drivers list and the OT counts

After you press a category, the drivers list opens just below the table, one row per driver.

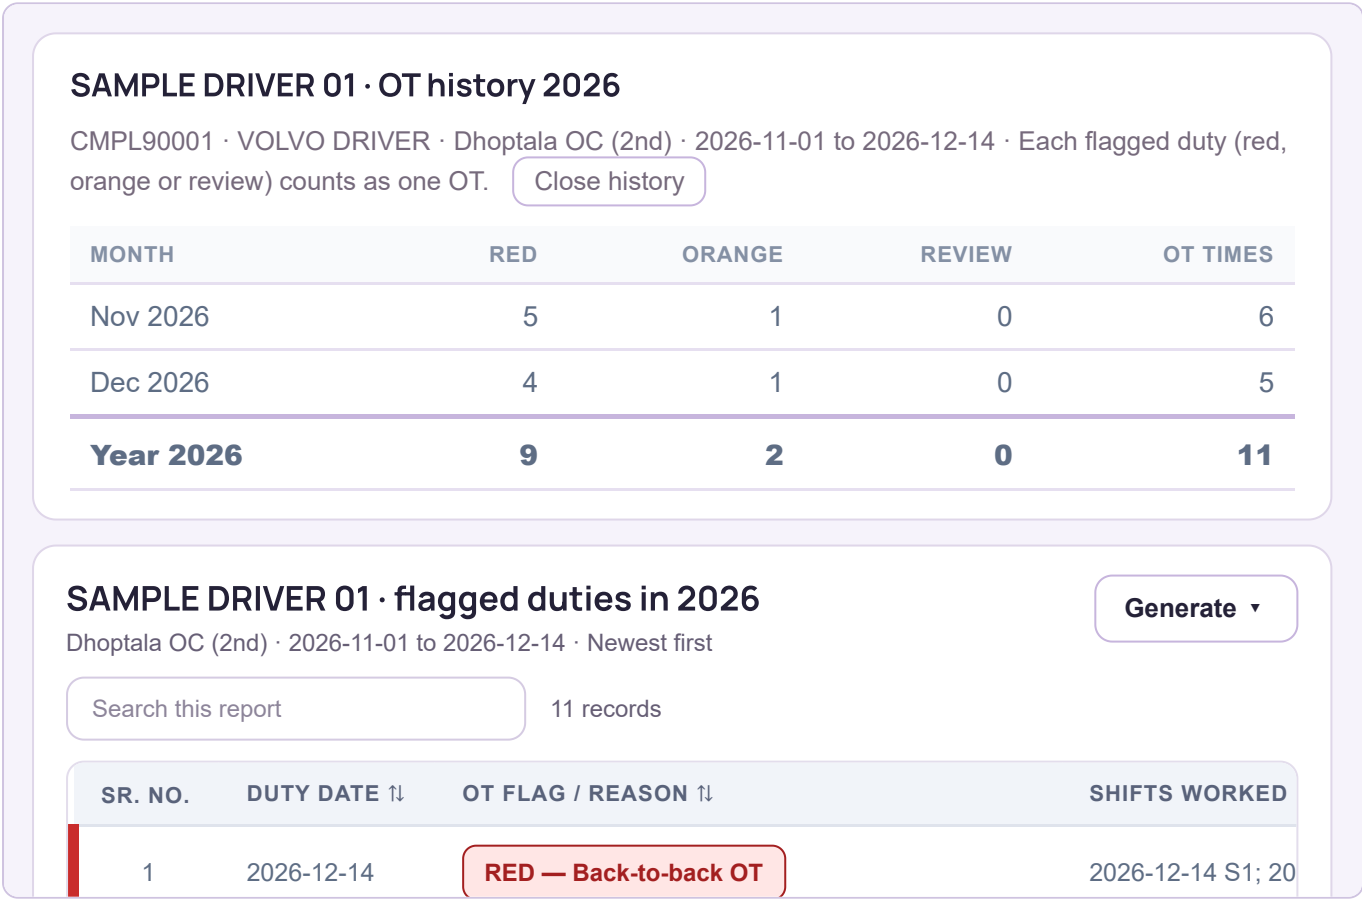

Picture 6. The drivers list. The two columns after the name show the driver's OT count for the month and for the year. *Sample data.*

Column	What it shows
OT in the month	How many flagged duties the driver has in the calendar month of your To date, at this site.
OT in the year	The same count for the calendar year. Records start on 1 November 2026, so 2026 covers November and December.
RED / ORANGE / REVIEW duties	The driver's flagged duties inside the dates you chose.
Log book, duty dates, shifts, equipment	Where and when those duties were done.

> **One OT is one flagged duty**, whether red, orange or review. While the counts are being read the cells say "Checking…". They never show 0 before the answer has come.

7. One driver's history

Press the driver's name. His history for the year opens below the list.

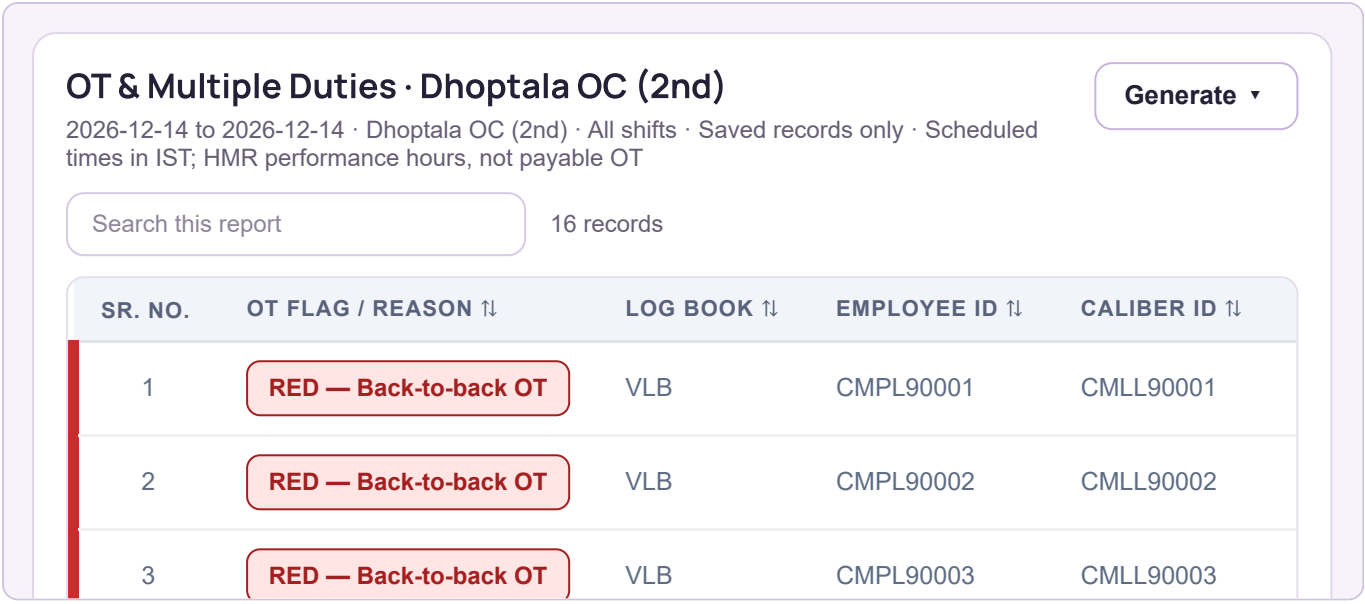

Picture 7. Press a driver's name to open his history: OT month by month, then every flagged duty, newest first. *Sample data.*

- The first table gives the count month by month, split into red, orange and review, with the year total in the last row.
- The second table lists every flagged duty of the year, newest first, with the shifts worked and the saved card numbers.
- Press the name again, or **Close history**, to close it.

8. The duty table and earlier repeats

At the bottom of an opened site, the duty table lists each flagged duty in full. It follows whatever you have pressed above it: log book, category and colour.

OT & Multiple Duties · Dhoptala OC (2nd)

2026-12-14 to 2026-12-14 · Dhoptala OC (2nd) · All shifts · Saved records only · Scheduled times in IST; HMR performance hours, not payable OT

16 records

SR. NO.	OT FLAG / REASON	LOG BOOK	EMPLOYEE ID	CALIBER ID
1	RED — Back-to-back OT	VLB	CMPL90001	CMLL90001
2	RED — Back-to-back OT	VLB	CMPL90002	CMLL90002
3	RED — Back-to-back OT	VLB	CMPL90003	CMLL90003

Picture 8. The duty table: one row per flagged duty, with the shifts worked and the saved cards behind it. *Sample data.*

Column	How to use it
OT flag / reason	The colour and the exact reason.
Log book	VLB, ELB, LMV, or two of them joined, such as VLB + LMV.
Shifts worked, scheduled start / end, gap	Which shifts, the Shift Master timings, and the rest between the duties.
Saved cards, source batches	The card numbers and batches the duty came from. Use these to open and check the original entry.
Remarks / review	Anything doubtful in the cards, such as a missing meter reading.

Earlier repeats. Press a number in the summary grid (step 3). A list opens with each driver of that colour and how many red and orange duties he had earlier at the same site, with the dates. It looks back up to 90 days before your From date.

RED drivers and their earlier repeats

2026-12-14 to 2026-12-14 · Dhoptala OC (2nd) · All shifts · Saved records only · Dhoptala OC (2nd) · VLB, ELB and LMV · Earlier counts cover all three log books

10 records

SR. NO.	EMPLOYEE ID	CALIBER ID	DRIVER / OPERATOR	SITE
1	CMPL90001	CMLL90001	SAMPLE DRIVER 01	Dhoptala OC (2nd)
2	CMPL90005	CMLL90005	SAMPLE DRIVER 05	Dhoptala OC (2nd)

Picture 9. Press a RED number in the summary grid to list those drivers with their earlier red and orange duties. *Sample data.*

9. Clear the review list

The last table on the page, **Manpower Data Review**, lists saved cards that could not be counted properly. Until they are corrected, the counts above may be short.

Picture 10. Manpower Data Review: saved cards that could not be counted properly and need correction. *Sample data.*

Reason shown	What to correct
Employee ID is missing or cannot be resolved	The card has no valid driver. Correct the Employee ID on the saved card.
Equipment master match is missing	The door number on the card is not in the Equipment master. Correct the card or the master.
Shift schedule is missing or ambiguous	The Shift Master has no clear timing for that site and shift. Get the Shift Master corrected.
Possible repeated scan / card	The same card appears to be saved twice. Compare the two cards and remove the wrong one.

10. Download, print and search

- Every table has a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains all rows of that table, not only the ones on screen.
- Type in **Search this report** to find a driver, door number or card inside a table.
- Press a column heading to sort by that column.

11. Daily review routine

Step	Do this
1	Open the report and set the dates to the day or days you are reviewing.
2	Read the RED column of the summary grid first, then ORANGE, then REVIEW.
3	Open each site that has a number on its card.
4	In the site, press the RED number of each driver category to get the drivers list.
5	For each driver, read OT in the month and OT in the year. Press the name of anyone who repeats and read his history.
6	Before reporting a case, check it in the duty table: shifts worked and saved cards. A wrong driver ID or a wrong shift on a card creates a false OT. Get such cards corrected in the log book.
7	Go through Manpower Data Review and get every listed card or master entry corrected.
8	Use Generate to download the drivers list or duty table for your record or report.

> **This guide shows how to find and verify the cases.** What action to take on a red or orange duty is as instructed by management.

12. Common questions

Question	Answer
A driver did OT but is not in the report.	Check that both cards are saved (not pending in scanning), carry the same Employee ID, and are at the same site. Look in Manpower Data Review for his cards.
The numbers changed since the morning.	More cards were saved, corrected or deleted. Press **Refresh reports** for the latest position.
VLB + ELB + LMV is more than All.	A duty done on two log books is counted under both. The All row counts it once.
OT in the year is the same as OT in the month.	That happens in the first month of records, or when all his OT of the year is in this month.
A driver works at two sites.	Counts are for one site at a time. Open the other site to see his duties there.
I do not see a site.	You see only the sites assigned to your login. Ask the administrator.
