CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · UTILISATION & EXCEPTIONS

Scan Review & Reconciliation

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

Lists the scanned cards whose date falls in the chosen dates, with the status of each card, the book number of the saved log book if one was created from it, and any error. A MIS clerk uses it to see which scanned cards are still waiting, which failed, and which became saved log books.

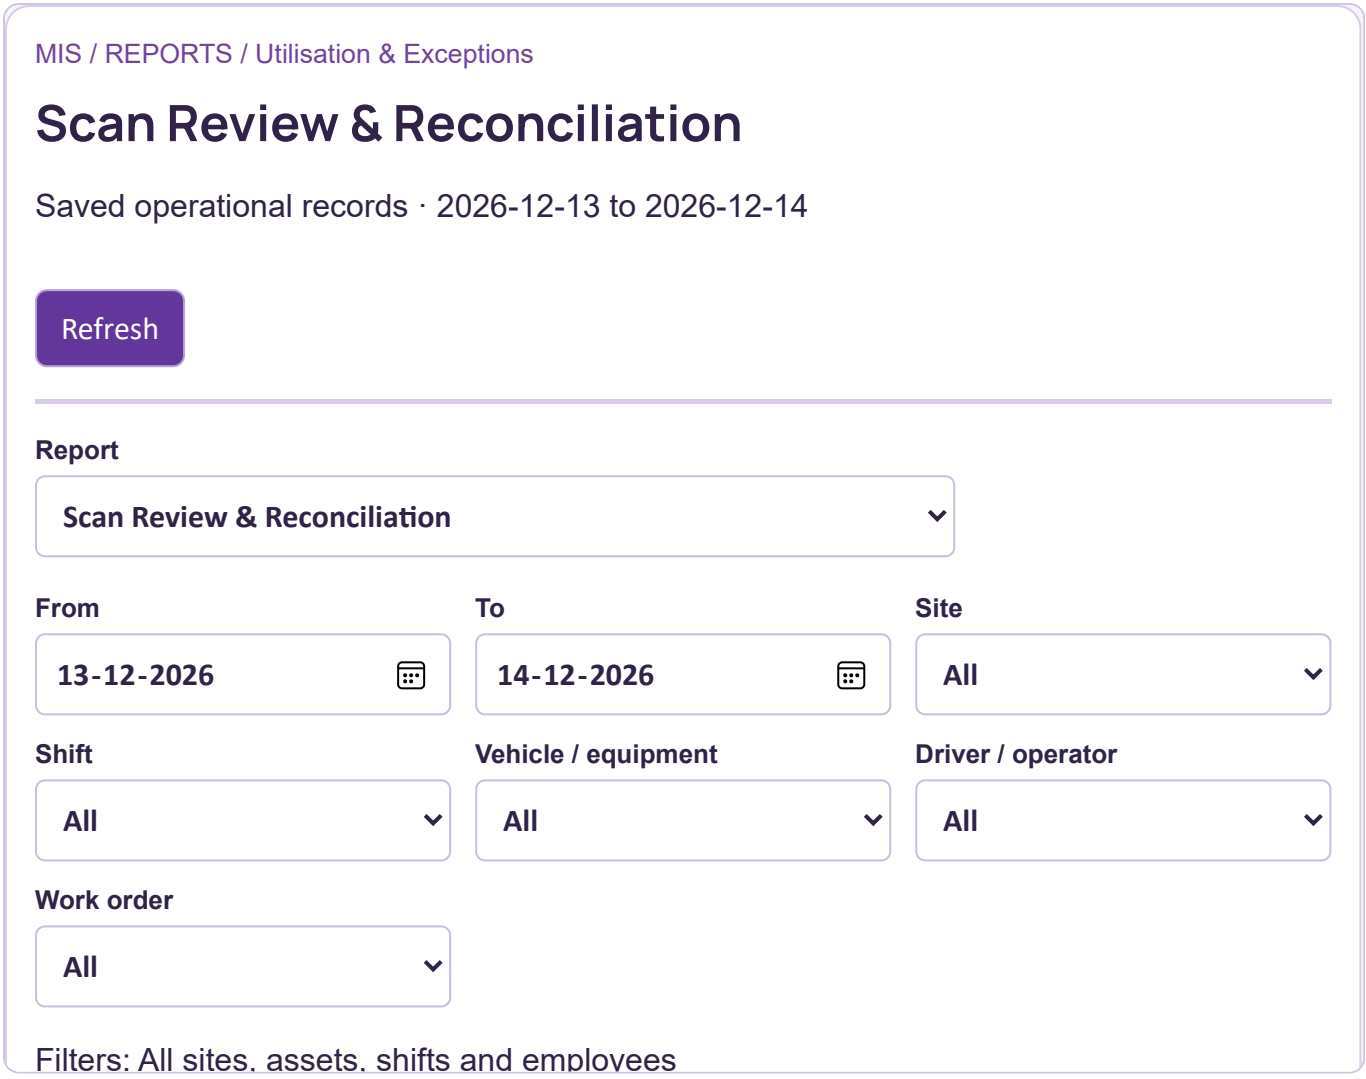

> **One row.** One row is one scanned card.

2. Open the report and choose what to see

In the left menu open **Reports** → **Utilisation & Exceptions** → **Scan Review & Reconciliation**. Then set the selectors described below.

Selector or button	What it does
From	First card date to include. The card date is the book date on the card; if the card has no book date, the date it was scanned (India time) is used. It opens on today's date. Dates before 1 November 2026 are not accepted.
To	Last card date to include. It cannot be earlier than From, and From to To can cover at most 366 days. If the dates are not valid the screen shows "Choose a valid date range of at most 366 days." and no report is shown. Keep in mind: Actions → Reset table also puts From and To back to today.
Site	Keeps only cards on which that site was read. Cards with no site read are left out. "All" means every site assigned to your login.
Shift	Keeps only cards on which that shift was identified. Cards with no shift identified are left out.
Vehicle / equipment	Keeps only cards on which that door was identified. Cards with no door identified are left out.
Driver / operator	Keeps only cards on which that person was identified. Cards with no person identified are left out.
Work order	Keeps only cards that carry that work order. Cards that do not carry it are left out.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Picker at the top of the screen. It lists all reports under their groups; choosing a name opens that report.
Refresh	Loads the scanned cards and saved records for the chosen dates again. Press it after more cards have been scanned or reviewed. Changing Site, Shift or the other selectors does not need Refresh.
Filters:	One line showing what is selected in Site, Shift, Vehicle / equipment, Driver / operator and Work order, written as "site: …", "shift: …", "asset: …", "employee: …" and "workOrder: …". With nothing selected it reads "All sites, assets, shifts and employees". Site and Work order appear by name; Shift, Vehicle / equipment and Driver / operator appear as the system's internal number.
logbooks	Number of saved VLB and ELB log books that match the dates and selectors. This counts saved log books, not scanned cards.
assets	Number of different doors on those saved log books.
trips	Total trips on those saved log books.

report rows	Number of scanned cards listed in the table below.
Includes pending, approved, posted, rejected and failed cards. Cards without a book date use the scan date (India time). Employee, shift, asset and site filters exclude cards whose corresponding fields are unreadable.	Notice shown above the table on this report. It states which cards are listed, which date is used, and how the selectors treat unread cards.
Scan data source is not available.	Shown only when the screen cannot find the scan card records. The table then has no cards to list.

4. The columns

Column	Meaning
Card ID	The system's own ID of the scanned card (a long code).
File	File name of the scanned image.
Date	Book date on the card. If the card has no book date, the date it was scanned (India time).
Site	Site on the scanned entry of the card. "—" if it was not read.
Caliber ID	Employee ID on the scanned entry of the card. "—" if it was not read.
Employee	Employee name on the scanned entry of the card. "—" if it was not read.
Status	Status stored on the card: "queued" or "reading" (waiting to be read, or being read), "review" (read and waiting to be checked), "approved", "posted" (saved as a log book), "rejected", or "error" (reading failed).
Saved book	Book number of the saved log book linked to this card. "—" if no log book is linked.
Error	Error message stored on the card, if any.

5. Keep in mind

- The logbooks, assets and trips totals count saved log books for the same dates and selectors. Only report rows counts scanned cards.
- Choosing a Site, Shift, Vehicle / equipment, Driver / operator or Work order leaves out every card on which that field is not available. Keep them on "All" to see unread and failed cards.
- A card without a book date is placed under the date it was scanned (India time).
- Cards from LMV scan batches are not included.
- A login limited to certain sites receives only cards whose site was read as one of those sites. Cards with no site read are not shown to such a login.
- If the screen shows "Scan data source is not available.", no cards are listed; the totals for saved log books are still shown.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From and To to the dates of the cards, and keep all selectors on "All".
2	Click the Status heading to sort. Note the cards with status "error" and read the Error column.
3	Note the cards still in "queued", "reading" or "review"; these have not become saved log books.
4	For cards with status "posted", check that Saved book shows a book number.
5	Compare the number of cards scanned for the day with report rows.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why did cards disappear when I chose a site?	A card is kept only if that site was read on it. Cards with no site read are left out. Set Site back to "All".
Why is the logbooks total different from the number of rows?	logbooks counts saved log books. The table lists scanned cards, including those waiting, rejected or failed.
What does "Scan data source is not available." mean?	The screen could not find the scan card records, so no cards are listed.
A card is shown under a date different from the one written on it. Why?	If the book date was not read, the card is shown under the date it was scanned.
