CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · REPORTS

VLB Reports

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026

1. What this report shows

VLB Reports shows every Vehicle Log Book (VLB) card saved in a batch. A batch holds the trip cards of one site, one date and one Shift, whether they were scanned, uploaded or typed in by hand. MIS users and administrators use it to check the cards and trips of a Shift, open any card with its original scan, and download or print the batch.

> **One row.** In the Shift batches view, one row is one saved VLB card: the trip card of one vehicle and driver in the chosen batch. In the Scan / upload batches view, one row is one scanned or uploaded card of the chosen scan batch, whether it is saved yet or not.

2. Open the report and choose what to see

In the left menu open **Reports** → **VLB Reports**. Then set the selectors described below.

Selector or button	What it does
Shift batches / Scan / upload batches	Two buttons at the top that change the view. Shift batches shows the saved VLB cards of a site, date and Shift batch. Scan / upload batches shows the report of a scan batch, with unsaved cards and the original card pictures.
Find batch	Type part of a batch name, site, date, Shift or batch status. Only matching batches stay in the batch list beside it. The date is matched as year-month-day, for example 2026-11-09. In the Scan / upload batches view it matches the batch name or the scan date. It does not filter the cards in the table.
Shift batch	List of batches of the sites allowed for your login. Batches that are not closed come first, then the newest. Each line reads: batch name · number of VLB · batch status. Type in the box to search the list. When the page opens it picks the first batch in the list that already has saved cards.
Report batch	Scan / upload batches view only. List of VLB scan batches, newest first. Each line reads: batch name · number of cards · scan date. When the view opens it picks the newest batch, unless the page address already names a batch.
Smart Search	Shift batches view. Box beside the table heading. Type a Card ID, vehicle, driver, source or any other value. Only the cards that match stay in the table.
Smart search all cards	Scan / upload batches view. Box inside the All cards heading. It searches every column of the card table, the status and the Issues text.
Column heading in All cards	Scan / upload batches view. Pressing a heading opens a small box. ↑ and ↓ sort by that column, × clears its sort and filter, the Filter... box searches the values, All Values removes the filter, and pressing one value shows only the cards with that value.

3. What is on the screen

On the screen	What it shows
Refresh reports	Reads the batch list and the chosen batch again. Use it to see cards saved after the page was opened.
Batch status (in the Shift batch list)	VLB open: the VLB of the batch is not locked yet. VLB locked · ELB open: VLB is locked and the ELB stage is open. Batch closed: the batch has been closed.
Total Cards / Total Trips	Two figures above the table. Total Cards is the number of saved cards in the batch. Total Trips adds up the trips of those cards.
Batch report · (batch name)	Heading of the card table. The line under it reads: OPEN or CLOSED · number of saved cards · site · date · Shift. CLOSED means the batch has been closed.
A table row or View VLB	Pressing a row, or the View VLB button in it, opens that card below the table under the heading Batch (batch name) · (Card ID). Back to batch report closes it.
Saved VLB values	All saved values of the opened card: Book NO, Book date, Location, Door NO, Equipment, Employee ID / Caliber ID, Driver, WO / Contract, Shift HRS, Shift, Trip card NO, OPN KMR, CLO KMR, Total KMR, OPN HMR, CLO HMR, Total HMR, Opening trips, Ending trips, Completed trips, Availability HRS, Running HRS, BD HRS, BD hours source, Idle HRS and Remark. An empty value shows as —. If a meter reading failed a check, two more boxes show HMR / KMR errors in red and Corrected HMR / KMR readings in green.
Individual trips and Machine-wise summary	Part of the opened card. Individual trips has one line per trip row with Tr.Sr.No, Equipment, L. time, U. time, Trips and Handover. The two time columns are left out for a card saved without times. Handover shows the trip status and, for a handed-over trip, the other driver, card number, date and times. Machine-wise summary gives the trips of each loading machine on this card.
Original scan	Shows the scanned picture of the card and an Open full-size scan link. For a card typed in by hand it says 'This entry was saved without a source scan.' If the picture cannot be read it says 'The original scan is unavailable.'
Report (inside the opened card)	The same card again as report tables, each with its own Print / Export button, which gives the same choices as Generate. The tables are VLB report · (Card ID) with the columns Field and Saved value, Meter corrections · (Card ID) when there are any, Individual trips · (Card ID) and Machine-wise summary · (Card ID).
Automatic MIS verification	Last part of the opened card. It shows the check of this trip card against Pulse in a table: Trip card / VLB, Vehicle / site, Status, Pulse request, Details. Status is Waiting / retrying, Needs MIS review or MIS verified in Pulse. Recheck, shown while the card is not verified, sends it to be checked again. If the card has no check it says 'This entry has no automatic verification job. Newly saved scanned vehicle trip cards are included.'

ELB -- Machine-wise shift report	A folded strip under the card table. Press it to open. It is there only after the VLB of the batch has been locked. Machines that loaded trips come first, then a group named Other equipment with each machine's status, hours, idle hours and remark, then a Totals row and the line Fleet summary: machines · working · down · idle. If no machine loaded trips it says 'No machine loaded trips in this batch.'
Data report / Card Report	Scan / upload batches view. Data report shows the totals and the All cards table of the scan batch. Card Report shows the Card index table and the original card pictures. The chosen scan batch reloads by itself every 5 seconds.
Download batch Excel / Download batch PDF	Scan / upload batches view. Saves the file VLB-batch-(Batch ID).xlsx or VLB-batch-(Batch ID).pdf. The Excel file has the sheets Batch summary, Cards, Individual trips and Loading equipment. The PDF has the same tables with fewer columns in Cards. Both hold saved cards only. The buttons cannot be pressed while a file is being made or when no card of the batch is saved.
Counted trips, Machine loading trips, Handover completions, Kilometres, Working hours	Scan / upload batches view. Totals of the saved cards of the scan batch. Counted trips adds the trips of the cards. Machine loading trips adds the trips of all trip rows except unloading-only rows. Handover completions adds the handed-over trips that were unloaded on these cards. Kilometres and Working hours add the KMR and HMR totals of the cards.
Colour legend	Five colour tags above All cards: Error / mismatch, Blank / rejected, Needs correction, Processing, Complete / saved. The Card and Status cells of each row carry the colour of the card. A single cell with a problem is also coloured. Hold the pointer on it to read the reason.
Card 1, Card 2 ... (in All cards)	Each card number is a link. Pressing it opens that card in the Trip Card Bulk Scan review screen.
Batch summary	Folded strip under All cards. It opens a table with Metric and Value: Batch ID, Batch name, Created, Cards in this batch, Saved cards, Pending / unresolved cards, Rejected cards, Deleted log books, Trips (saved cards), Kilometres (saved cards) and Working hours (saved cards).
Deleted scanned cards	Shown only when cards were deleted from the scan batch. Each line reads Card (number) · Vehicle (door), or Vehicle not identified.
Original card pictures (Card Report)	12 cards per page. Each shows Card (number) · book number, the file name, Front and back or Single page, and the picture. View full size opens the picture in a new tab. Download original saves it as original-card-(number). Previous cards and Next cards change the page. If a picture fails it says 'Could not load original card.' with a Retry button.
Load older batches	Scan / upload batches view. The Report batch list is first filled from the latest 100 scan batches. This button, shown when there are more, adds the next older ones.

Messages when nothing is shown	'No shift batches yet. A report appears here as soon as a VLB batch is created for a site, date and shift.' means no batch exists for your sites. 'No VLB card has been saved in this batch yet.' means the chosen batch is empty. 'No cards match this search in the opened batch.' means Smart Search or a filter hides every card. 'Shift batch reports are not available for this login (...). Showing scan / upload batches.' means the login cannot read shift batches, so the page moved to the other view.

4. The columns

Column	Meaning
Batch report · Sr. No.	Running number of the row in the table.
Batch report · Card ID	VLB book number that Pulse-II gave the card when it was saved.
Batch report · Trip card NO	A Form / Trip Card number written on the card. Shows — when it was not entered.
Batch report · Source	VLB Scan when the card was saved from a scanned or uploaded picture. VLB Manual when it was typed in by hand.
Batch report · Date	Book date of the card.
Batch report · Site	Site of the card.
Batch report · Shift	Shift of the card.
Batch report · Vehicle	Door number of the vehicle, for example V9001.
Batch report · Driver	Driver name saved on the card, for example SAMPLE DRIVER 01.
Batch report · Employee ID	Caliber ID of the driver, for example CMPL90001.
Batch report · Trips	Completed trips saved on the card.
Batch report · Total KMR	Total running KMR saved on the card.
Batch report · Total HMR	Total working HMR saved on the card.
Batch report · Remark	Remark saved with the card.
Batch report · HMR / KMR errors	In red. The column is shown only when at least one card in the batch had a meter reading that failed a check. It names the driver and Caliber ID, then gives the opening → closing reading of HMR or KMR, the difference, the Shift hours and the reason.
Batch report · Corrected HMR / KMR readings	In green, beside the errors column. The readings as saved after correction, with who saved the correction and when. It stays empty when no correction was saved or the reading still fails the check.
Batch report · Additional card	The column is shown only when at least one card was saved by hand as a second card for the same vehicle, driver and Shift. It reads 'Yes, also (Card ID of the other card): (reason entered)'. Other rows show —.
Batch report · Details	Holds the View VLB button that opens the card.

ELB -- Machine-wise shift report · Door	Door number of the machine.
ELB -- Machine-wise shift report · Equipment	Equipment name of the machine.
ELB -- Machine-wise shift report · Trips	Trips the machine loaded, taken from the VLB cards of the batch.
ELB -- Machine-wise shift report · Cards	Number of VLB cards that name this machine.
ELB -- Machine-wise shift report · Operator	Operator name or names from the ELB of the machine.
ELB -- Machine-wise shift report · Opening HMR	Lowest opening HMR on the ELB cards of the machine for this Shift.
ELB -- Machine-wise shift report · Closing HMR	Highest closing HMR on the ELB cards of the machine for this Shift.
ELB -- Machine-wise shift report · Hours	Working HMR of the machine, added over its ELB cards.
ELB -- Machine-wise shift report · Trips/hour	Trips divided by Hours. Shows — when there are no hours.
ELB -- Machine-wise shift report · BD hours	Breakdown hours from the latest ELB of the machine.
ELB -- Machine-wise shift report · Status	Shift status saved in the ELB: Working; Working, partial breakdown; Breakdown; Maintenance; No operator; Not in use. Not saved means no ELB status has been saved for the machine yet.
ELB -- Machine-wise shift report · ELB no.	ELB book number or numbers of the machine.
All cards · Card	Order number of the card in the scan batch, shown as a coloured link: Card 1, Card 2 and so on.
All cards · Status	Coloured status of the card. Processing: waiting or being read. Saved: saved as a VLB. Ready to save: values complete, not saved yet. Needs correction: a value is missing or wrong. Blank / rejected: no usable data on the card. Rejected: the card was rejected. Error / mismatch: reading failed, or the date, site or Shift does not match the batch, or the saved values are unavailable. Deleted log book: its saved VLB was deleted. The filter list of this column uses longer wording: Waiting for extraction, Extracting, Pending correction / saving, Waiting to save, Saved, Rejected, Extraction failed, Deleted log book, Date/site/shift mismatch, Saved values unavailable.
All cards · Card number	A Form / Trip Card number of the card.
All cards · Book NO	VLB book number. It is filled once the card is saved.
All cards · Date	Book date, shown as day-month-year.
All cards · Location	Site of the card.

All cards · Door / Equipment	Door number of the vehicle.
All cards · Employee ID	Caliber ID or employee code of the driver.
All cards · Driver	Driver name.
All cards · Shift	Shift of the card.
All cards · Shift HRS	Shift hours of the card.
All cards · WO / Contract	Work order / contract of the card.
All cards · OPN KMR	Opening KMR.
All cards · CLO KMR	Closing KMR.
All cards · Kilometres	Total running KMR of the card. If that is not saved, closing KMR minus opening KMR.
All cards · OPN HMR	Opening HMR.
All cards · CLO HMR	Closing HMR.
All cards · Working hours	Total working HMR of the card. If that is not saved, closing HMR minus opening HMR.
All cards · Opening trips	Opening trips figure of the card.
All cards · Ending trips	Ending trips figure of the card.
All cards · Counted trips	Total trips of the card. If that is not saved, the sum of its trip rows.
All cards · Source file	File name of the scanned picture.
All cards · Remarks	Remark of the card.
All cards · HMR / KMR errors	In red. The column is shown only when at least one card of the scan batch has a meter error. Same meaning as in the Batch report table.
All cards · Corrected HMR / KMR readings	In green. The readings as saved after correction. Same meaning as in the Batch report table.
All cards · Issues	Brown tags name the kind of problem: Wrong door no., Wrong Caliber ID, Wrong HMR, Wrong KMR, MWS / TED mismatch. The line '(number) issue(s)' opens the list of messages. When there is no issue it repeats the status.
Card index · Sr. No.	Running number of the row in the table.
Card index · Card	Order number of the card in the scan batch.
Card index · Source file	File name of the scanned picture.
Card index · Status	Stage of the card as a code word: queued (waiting to be read), reading (being read), review (waiting for correction or saving), approved (waiting to save), posted (saved), rejected, error (reading failed).
Card index · Book number	VLB book number. It is filled once the card is saved.
Card index · Pages	Number of pages scanned for the card: 1 or 2.

5. Keep in mind

- Only batches of the sites allowed for your login are listed, and only batches dated 01-11-2026 or later.
- Nothing can be edited or deleted on this page itself. The only action on data is Recheck in Automatic MIS verification.
- The columns HMR / KMR errors, Corrected HMR / KMR readings and Additional card are hidden when no card in the batch has anything to show in them.
- In the Scan / upload batches view the totals, the Excel and the PDF count saved cards only. For a saved card the table shows the saved VLB values. For an unsaved card it shows the values read from the scan.
- The Shift batches view does not reload by itself. Press Refresh reports. The Scan / upload batches view reloads the chosen batch every 5 seconds.
- The ELB -- Machine-wise shift report strip is absent while the batch status is VLB open.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Open Reports → VLB Reports, stay on Shift batches and choose the batch of the site, date and Shift in Shift batch. Use Find batch to shorten the list.
2	Compare Total Cards with the number of trip cards received for that Shift, and Total Trips with the trip count from the site.
3	For each vehicle check Driver, Employee ID, Trips, Total KMR and Total HMR against the paper trip card.
4	Open any doubtful card with View VLB and compare Saved VLB values with the picture under Original scan.
5	If the HMR / KMR errors or Additional card column is present, read every entry in it and the corrected reading beside it.
6	Press Generate to download or print the batch table.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
A batch is missing from the Shift batch list. Why?	The list holds only batches of the sites allowed for your login and dated 01-11-2026 or later. Clear the Find batch box and press Refresh reports. A batch appears only after it has been created for that site, date and Shift.

The page says 'No VLB card has been saved in this batch yet.' What does it mean?	The chosen batch exists but no card has been saved in it. Choose another batch in Shift batch. The number of VLB in each line of the list tells which batches have cards.
Why is there no picture under Original scan?	A card typed in by hand, shown as VLB Manual in Source, has no scan, so the page says 'This entry was saved without a source scan.' For a scanned card, 'The original scan is unavailable.' means the picture could not be read.
What is the difference between Shift batches and Scan / upload batches?	Shift batches groups the saved cards by site, date and Shift and includes cards typed in by hand. Scan / upload batches groups cards by the scan batch they came in, also shows unsaved and rejected cards, and gives the original pictures and the batch Excel and PDF.
