CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · MANPOWER & OT

Shift Attendance Equipment Wise

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 10 November 2026

1. What this report shows

Shows who was on duty in each shift, in three steps: all sites by shift, then one site and shift by equipment, then the drivers of that equipment. It counts actual duties (one for each driver, date and shift) and equipment-wise duties (one for each equipment group the driver worked on), and colours the rows that belong to a back-to-back, gap, review or 0-trip pattern. It also shows, for every site and shift, whether the batch has been created and closed, and opens a driver's month-wise history from his name. A site in-charge or MIS clerk uses it to check shift attendance against the saved VLB and ELB cards and the zero-trip attendance entries, and to see which shifts are still waiting for a batch.

> **One row.** In the driver list one row is one driver on one duty date, in one shift, at one site, on one equipment group. In the first table one row is a site, and in the second table one row is an equipment.

2. Open the report and choose what to see

In the left menu open **Reports** → **Manpower & OT** → **Shift Attendance Equipment Wise**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last duty date of the report. Both open on today's date. A date before 1 November 2026 cannot be chosen, To cannot be earlier than From, and the range can cover at most 31 days. Outside these limits nothing loads and the screen says "Choose a valid range of up to 31 days, starting on or after 1 November 2026." With one date the date is written in the headings; with more than one date the driver list adds a Duty date column.
Site	Loads only that site and opens its "duties by equipment" table directly, without pressing a number. "All" loads every site assigned to your login. Changing the site sets Saved batch and Door / equipment back to "All".
Shift	Keeps only the duties of one shift. The first table then shows only that shift's column and "All shifts". Row colours are still worked out from all shifts.
Saved batch	Keeps the duties that have a card in the chosen batch. A zero-trip attendance entry belongs to no batch, so a driver who has only such an entry is not listed while a batch is chosen.
Employee	Keeps the duties of one employee. Each entry reads Employee ID · name, for example "CMPL90001 · SAMPLE DRIVER 01".
Door / equipment	Keeps the duties that include the chosen door number, for example V9001. Other machines the driver worked on in the same shift stay listed.
Today	Button. Sets From and To to today's date. The other selections stay.

Clear selections	Button. Sets Site, Shift, Saved batch, Employee and Door / equipment back to “All”. The dates stay.
Auto-hide filters	Tick box. When ticked, the selectors are tucked away and only a bar with the current dates, site and shift stays on screen. Move the mouse over the bar, or press it, to open the selectors; they close when the mouse leaves. The choice is remembered in this browser.
Refresh reports	Button at the top right. Reads the saved records again with the same selections. It cannot be pressed while a load is running.

3. What is on the screen

On the screen	What it shows
REPORTS / MANPOWER & OT	The page heading, with the title “Shift Attendance Equipment Wise” under it. The next line reads “Saved duties, clear assignments and shift-by-shift performance.”
Manpower by Category · Shift Performance · Shift Attendance Equipment Wise · OT & Multiple Duties	The tab row. Press a name to open that view. The dates and selections stay the same when you move between these four tabs.
Bar above the selectors	Shows the From and To dates in use, the site (or “All assigned sites”), the shift (or “All shifts”) and how many of Saved batch, Employee and Door / equipment are set, for example “2 more selections”. The bar can be pressed only when “Auto-hide filters” is ticked.
Loading saved records and checking shift patterns…	Shown while the report is being read. The tables appear when the reading is over.
Error message	If the report cannot be read, the reason is shown in place of the tables. For example “This range contains too many saved cards. Select a shorter date range.” or “This range contains too many attendance entries. Select a shorter date range.” (more than 50,000 in the chosen dates).
Line under the selectors	Repeats the dates, site and shift in use, then “Saved records only” and “Updated … IST”, the time at which this report was read. This tab has no count cards.
(number) actual duties · (number) equipment-wise duties	The line at the top of the report. It gives both totals for everything loaded and then the rule: “An actual duty is one driver in one shift on one date. A driver on two equipment types in one shift is counted on both machines and once in actual duties.”
(number) shifts without a batch · (number) batches open	The line above the first table. The red label counts the site-and-shift boxes whose batch has not been created; the orange label counts the batches that are created but not closed. When there is neither it says “Every shift that has ended has a closed batch.” The same line then reads “Red box: batch not created. Orange outline: batch not closed. Press a number to see that site and shift by equipment.”

All sites, shift-wise · (date) · actual duties	Step 1, the first table. One row for each site assigned to your login, and with more than one site an “All sites” row at the bottom. Each box gives the actual duties of that site and shift and shows the batch of that shift. The whole box is red and says “No batch” while no batch has been created for that site, date and shift. It has an orange outline and says “VLB open”, “LMV open” or “ELB open” while the batch is created but not closed. A plain box means the batch is closed, or the shift has not ended yet. With more than one date the box says how many days are waiting, for example “3 days no batch”. A red or orange box can be pressed even when it shows 0. The “All shifts” and “All sites” boxes are never coloured; they carry a note such as “2 shifts no batch · 1 open”. Pressing the same box again closes the tables below. If no site can be shown it says “No site is available for these selections.”
Press a number above to see the duties by equipment, then the drivers.	Shown under the first table until a number is pressed.
(site) · (shift) · (date) · duties by equipment	Step 2, the second table. It opens when a number is pressed in the first table, or by itself when only one site is loaded. One row for each equipment, the one with the most duties first, and an “All equipment” row at the bottom. The hint reads “Press an equipment or a number to list its drivers below.” The equipment name and the Equipment-wise duties number open all drivers of that equipment; a Red, Orange, Brown or Blue number opens only the rows of that colour. Pressing the same choice again closes the driver list. If the opened site and shift have no duty it says “No duty saved in this selection.”
Batch not created: … · Batch not closed: …	Lines under the title of the second table. “Batch not created:” names the shifts of the opened site that have ended without a batch: “this shift” when one shift of one date is open, otherwise the dates and shifts, for example “11-11-26 · 12-11-26”. “Batch not closed:” names each open batch with its stage, for example “(batch name) (ELB open)”. Neither line appears when every batch is closed.
Showing … below. · Close the driver list	Shown above the second table while a driver list is open. It names the equipment and the colour being listed, for example “Showing Water Tanker · Red only below.” The button “Close the driver list” closes the list and keeps the site and shift open.
(number) duties here are a second machine for the driver: counted on each machine, once in actual duties.	The line under the second table. It appears when Equipment-wise duties are more than Actual duties and gives the difference.
White · Normal duty / Red · Back-to-back shifts, or all three shifts / Orange · Shift 1 and Shift 3 with a gap / Brown · Shift pattern needs review / Blue · Present with 0 trips	The colour key shown above the driver list. Every row of the list has one of these five colours.

Shift Attendance Equipment Wise · (site) · (shift) · (date) · (equipment)	Step 3, the driver list. The line under its title gives the equipment-wise duties and the actual duties in the list, then “Saved records only” and “Press a name for the month-wise history”. Site, shift and date are written in the title; each comes back as a column only when the list covers more than one. When a colour number was pressed the title ends with that colour, for example “Red only”. If nothing matches it says “No duty matches this selection.”
(driver) · history (year)	Opens under the driver list when a driver’s name is pressed. The first line gives his Employee ID, the equipment, the site and the period read, then “Duties are saved VLB and ELB cards, one per shift. Each red, orange or brown case counts as one OT.” A small table follows with one row for each month and a “Year” row at the bottom. While it is being read it says “Reading this driver’s history…”. Press the name again, or “Close history”, to close it.
(driver) · flagged duties in (year)	The table under the history. It lists every red, orange or brown duty of that driver at that site in the year, newest first. If he has none it says “No red, orange or brown duty for this driver in this year.”
(number) saved cards need correction (list for the MIS team)	One line near the bottom. Press it to open “Manpower Data Review”: every problem found on the selected VLB and ELB cards, one row for each problem, so that it can be corrected. Press the line again to close the list. The line is not shown when no card needs correction.
Sources and calculation rules	Press to open the written rules the report follows; the last three rules are about this tab. The closing line says that manpower requirements, shortages and relief availability are reserved for a later phase.

4. The columns

Column	Meaning
All sites, shift-wise · Site	Name of the site. Every site assigned to your login is listed, also one with no duty. The last row, “All sites”, appears when more than one site is listed and gives the total of all of them.
All sites, shift-wise · Day shift / Night shift	Shown only when the loaded duties include a Day (D) or Night (N) shift. Actual duties of the site in that shift.
All sites, shift-wise · Shift 1	Actual duties of the site in Shift 1 (S1) for the chosen dates: one for each driver and date. A driver who worked at two sites in one shift is counted at one site only. The box is red or outlined orange according to the batch of that shift, as described above. Press the box to open that site and shift.
All sites, shift-wise · Shift 2	The same count for Shift 2 (S2).
All sites, shift-wise · Shift 3	The same count for Shift 3 (S3).
All sites, shift-wise · All shifts	Actual duties of the site in all shifts together, with a note of the shifts that have no batch or an open batch. Press the box to open the site without choosing a shift.

Duties by equipment · Equipment	Name of the equipment: the machine's group in the Equipment master, found through the door number on the saved card. Names that differ only in capital letters or spaces are shown as one. "Group missing in master" means the machine has no group or the card has no Equipment master match. "No equipment assigned" is a zero-trip attendance entry saved without a machine. The last row is "All equipment".
Duties by equipment · Equipment-wise duties	Number of driver rows on this equipment: one for each driver, date, shift and site. A driver who worked on two equipment groups in one shift is counted on both. Press the number to list these drivers.
Duties by equipment · Actual duties	How many of those rows carry the driver's one actual duty for that date and shift. The rest are second machines. This number cannot be pressed.
Duties by equipment · Second machine	Equipment-wise duties minus Actual duties: the rows where this equipment was a driver's second machine in that shift, for example 128 minus 124 gives 4. Press the number to list only those drivers; the title then ends with "Second machine only". In that list, Duty note names the machine that carries the driver's actual duty. A driver who drove two machines of the same equipment group in one shift is one row with both door numbers and is not counted here. 0 cannot be pressed.
Duties by equipment · Red	Rows on this equipment that are red: back-to-back shifts, Shift 3 followed by the next day's Shift 1, or all three shifts. Press the number to list only these rows.
Duties by equipment · Orange	Rows that are orange: Shift 1 and Shift 3 on the same date with a gap between them. Press the number to list only these rows.
Duties by equipment · Brown	Rows that are brown: more than one duty whose shift pattern or timing could not be confirmed and needs review. Press the number to list only these rows.
Duties by equipment · Blue	Rows that are blue: present with 0 trips, from a zero-trip attendance entry or a VLB card saved with 0 trips. Press the number to list only these rows.
Driver list · Duty date	Book date of the duty. Shown only when From and To are different dates.
Driver list · Site	Site of the duty. Shown only when the "All sites" row was opened.
Driver list · Shift	Shift code of the duty, for example S1. Shown only when "All shifts" was opened.
Driver list · Employee ID	Employee ID from the employee master. Only matched employees are listed.
Driver list · Caliber ID	Caliber ID mapped to that employee in the master.
Driver list · Driver / operator	Name from the employee master, for example SAMPLE DRIVER 01. The name is a button: press it to open that driver's history under the list. When a saved card names a second operator for the same shift, he is listed too, on the same machine.
Driver list · OT in (month)	How many red, orange and brown cases the driver has at that site in the calendar month of the To date, for example "OT in Nov 2026". It says "Checking…" while the count is being read and "Unavailable" if it could not be read. In a list opened from the "All sites" row it says "Press the name" until that driver's name is pressed.

Driver list · OT in (year)	The same count for the calendar year of the To date, for example “OT in 2026”. Records start on 1 November 2026.
Driver list · Door / equipment	Door numbers the driver worked on in this equipment group in that shift, for example V9001. Two machines of the same group show both door numbers, separated by “;”. Blank for a zero-trip entry saved without a machine.
Driver list · Equipment	Name of the equipment, as in the second table. Shown only when the “All equipment” row was opened.
Driver list · Make / model	Make and model of the machine from the Equipment master. “Make not named” means the master has no make name, or only a number.
Driver list · Attendance	“Present — with trips” when a saved card of that shift has trips. “Present — 0 trips” when there is a zero-trip attendance entry or a VLB card saved with 0 trips, and no card with trips and no ELB card. “Present” in the other cases, for example an ELB card without trips.
Driver list · Completed VLB trips	Completed trips of the VLB cards on this row, added. Shows “—” when the cards of the row carry no VLB trip count, for example an ELB card. Shows 0 for a zero-trip entry without a card.
Driver list · Actual duty	“Yes” on the row that carries the driver’s one actual duty for that date and shift. “No — second machine” on his other rows of the same shift. The actual duty sits on the equipment with the most HMR hours in that shift; when hours are missing or equal, on the card saved first.
Driver list · Duty flag	The row colour in words: “Normal duty”, “BLUE — Present with 0 trips”, or the OT reason, for example “RED — Back-to-back OT”, “RED — Shift 3 followed by next day’s Shift 1”, “ORANGE — Shift 1 and Shift 3 with a shift gap” or “REVIEW — Multiple duties; schedule or shift pattern needs confirmation”. REVIEW rows are brown. A row has one colour, in the order red, orange, brown, blue.
Driver list · Duty note	Names the other shift of the pattern, for example “Also worked S2” (a shift on another date is written with its date), and the other machine, for example “Also worked on V9001 (Water Tanker)” or “Second machine in this shift; actual duty counted on V9001 (Water Tanker)”. Blank for a single duty on one machine.
Driver list · Zero-trip reason	Reason chosen in the zero-trip attendance entry: Rain, No work, Breakdown or Other. Blank when there is no such entry.
Driver list · Remarks	Remarks typed in the zero-trip attendance entry. Blank when there is none.
History · Month	One row for each month of the year in which the driver has a duty or an OT case at that site. The last row, “Year”, adds them.
History · Duties	Actual duties of the driver at that site in the month, from saved VLB and ELB cards: one for each date and shift. A zero-trip entry without a card is not counted here.
History · Red	Red cases that started in the month: back-to-back shifts, Shift 3 followed by the next day’s Shift 1, or all three shifts.
History · Orange	Orange cases in the month: Shift 1 and Shift 3 on the same date with a gap.

History · Brown	Brown cases in the month: more than one duty whose shift pattern or timing needs review.
History · OT times	Red, orange and brown cases of the month added together. One case counts as one OT.
Flagged duties · Duty date	Date on which the case started.
Flagged duties · OT flag / reason	The colour and the reason in words, for example “RED — Back-to-back OT”.
Flagged duties · Shifts worked	The dates and shifts that make the case, for example “2026-11-09 S1; 2026-11-09 S2”.
Flagged duties · Log book	VLB, ELB or LMV, or two of them joined, for example “VLB + LMV”.
Flagged duties · Equipment worked	Equipment group and make of the machines worked on.
Flagged duties · Combined HMR performance hours	HMR hours of the shifts in the case added together. These are machine hours, not payable OT hours. Shows “—” when a card has no valid HMR.
Flagged duties · Saved cards	Book numbers of the cards behind the case. Use them to find the cards.
Manpower Data Review · Duty date	Book date of the card that has the problem.
Manpower Data Review · Site	Site of that card.
Manpower Data Review · Shift	Shift code of that card.
Manpower Data Review · Door / equipment	Door number of that card.
Manpower Data Review · Employee ID	Matched Employee ID, or the ID saved on the card when it was not matched.
Manpower Data Review · Driver / operator	Name of the driver or operator on that card.
Manpower Data Review · Saved card	Book number of the card. Use it to find the card.
Manpower Data Review · Log book	VLB or ELB. LMV items are shown only on OT & Multiple Duties.
Manpower Data Review · Source batches	Names of the batches holding the card, or “Saved VLB (no site batch)” / “Saved ELB (no site batch)”.
Manpower Data Review · What to correct	The problem in words. Examples: “Employee ID is missing or cannot be resolved to an employee master.”, “Equipment master match is missing.”, “Group is missing in Equipment master.”, “Saved shift labels conflict; excluded from duty totals.”

5. Keep in mind

- The rows come from saved VLB and ELB log books and from zero-trip attendance entries (“Present — 0 trips”), dated 1 November 2026 or later. Pending scans and deleted records are excluded, and LMV log

books are not listed on this tab. The tab shows who has a saved record for the shift; it holds no clock-in or clock-out time.

- Actual duties count each driver once for a date and shift, whatever number of machines he drove. Equipment-wise duties count him once on every equipment group he worked on in that shift. The first table shows actual duties; the driver list can have more rows than actual duties.
- Red, orange and brown follow the same shift patterns as OT & Multiple Duties, which also reads saved LMV log books, so the other shift named in Duty note can be a duty that is not listed on this tab. Shift timings come from the Shift Master, and one day before and one day after the chosen dates are also checked. Blue is never given to an operator who has a saved ELB card, and a driver who has only a zero-trip entry and no saved card is not checked for red, orange or brown.
- The red and orange boxes are about the batch, not about the duties. A shift counts as missing its batch only after it has ended by the Shift Master times, so the running shift is not red. A site is expected to run the shifts its Shift Master holds on that date; a site with no work therefore stays red until a batch is created.
- OT in the month, OT in the year and the history count the cases at one site, from the later of 1 January and 1 November 2026 up to today. The first reading for a site can take a few seconds. Duties in the history come from saved VLB and ELB cards only.
- Equipment names follow the group in the current Equipment master, so renaming a group also changes how earlier dates are shown. A card whose Employee ID was not matched to the employee master is not counted on this tab; it is listed among the cards that need correction.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From and To (one date gives the shortest lists) and Site if needed. Confirm them in the line under the selectors, and press “Refresh reports” if records were saved after the “Updated” time.
2	In “All sites, shift-wise”, read the red boxes first: each is a shift that has ended with no batch. Then read the boxes with an orange outline: their batch is not closed. Press a box to see which dates and batches are waiting.
3	Read the actual duties of each site for Shift 1, Shift 2 and Shift 3 and compare them with the site’s own count for that shift. Press the number you want to check.
4	In “duties by equipment”, compare Equipment-wise duties with Actual duties for each equipment. A difference means a driver worked on a second machine; the line under the table gives the count.
5	Press a Red, Orange, Brown or Blue number. In the driver list read Duty flag and Duty note, then OT in the month and OT in the year; press the name of a driver who repeats and read his history. For blue rows read Zero-trip reason and Remarks.

6	Press the line “saved cards need correction” near the bottom. Cards listed there with an Employee ID problem are not counted in the tables above.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why are equipment-wise duties more than actual duties?	A driver who worked on two equipment groups in one shift is listed on both. He has one actual duty: “Yes” on the equipment with the most HMR hours and “No — second machine” on the other.
A driver was present but made no trip. Where is he?	If a zero-trip attendance entry was saved for him, or his VLB card was saved with 0 trips, he is listed with Attendance “Present — 0 trips” and a blue row. Press the Blue number in the second table to list such rows.
A box is red although it shows duties. Why?	The colour is about the batch. The cards of that shift are saved, but no batch has been created for that site, date and shift. Open the box: the line “Batch not created” names it.
What do “Checking…”, “Unavailable” and “Press the name” mean under OT in the month?	“Checking…” means the count is still being read. “Unavailable” means it could not be read; press “Refresh reports” and try again. “Press the name” appears in a list opened from the “All sites” row: the count is read for one site at a time, so press the driver’s name to read his site.
