CALIBER MINING AND LOGISTICS LIMITED · PULSE-II · TRIPS & PRODUCTIVITY

Vehicle-wise Trip Report

Operating manual

For site in-charges, MIS staff and reviewers · Matches the system as of 9 November 2026 · The picture uses sample data, not real records

1. What this report shows

Adds up, for each vehicle, the trips, kilometres and running hours of its saved Vehicle Log Books in the chosen dates, and names the drivers who drove it. It is used to compare vehicles and to check the total of one vehicle.

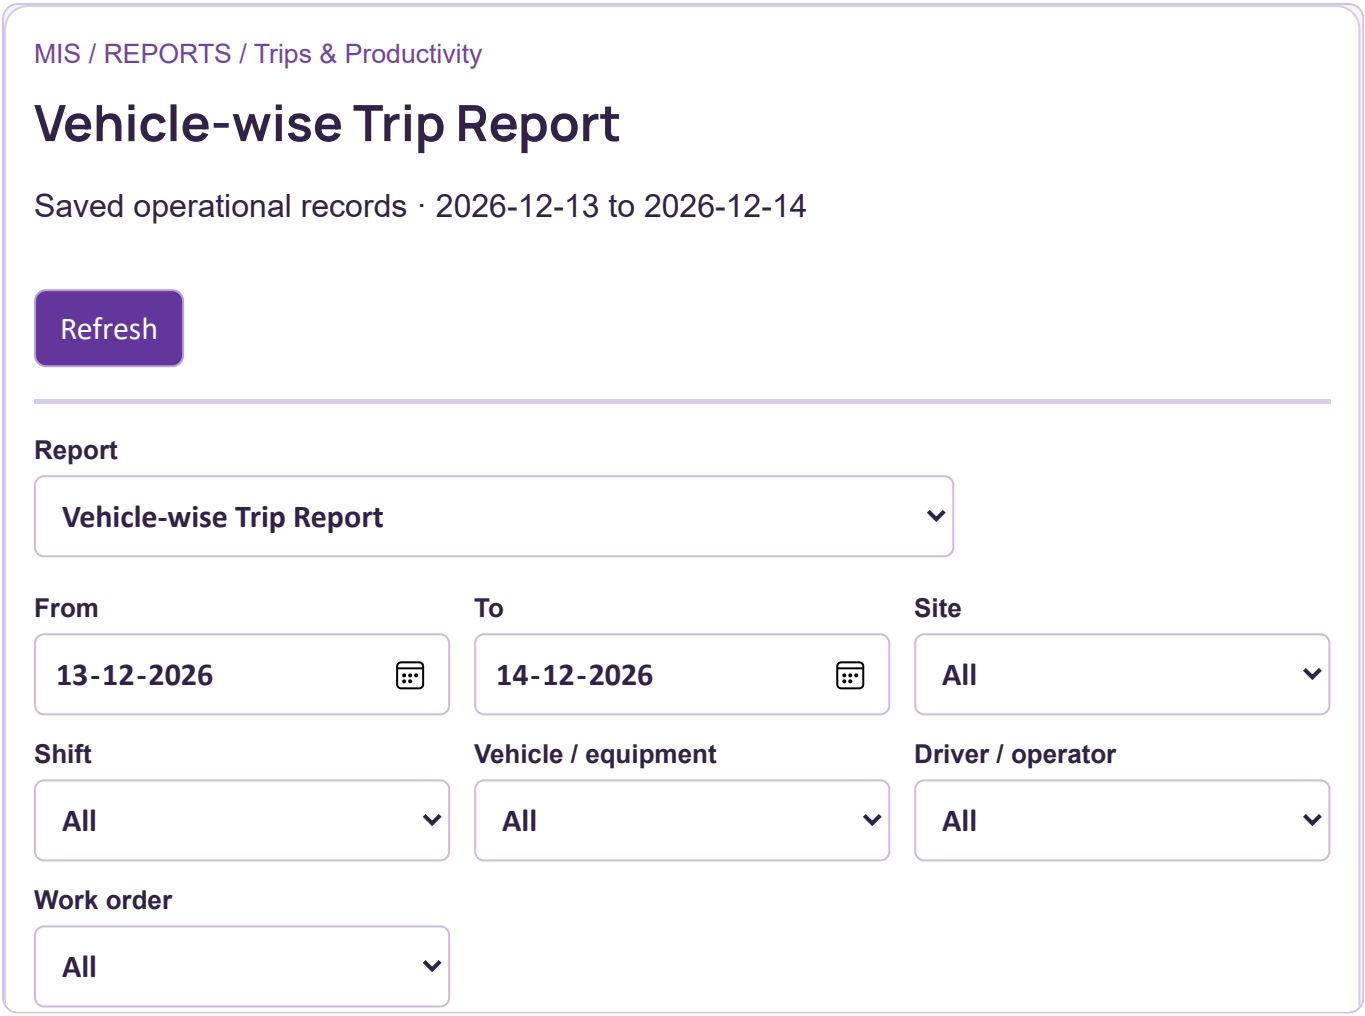

> **One row.** One row is one vehicle (door number) at one site. All its saved Vehicle Log Books from From to To are added up in it.

2. Open the report and choose what to see

In the left menu open **Reports** → **Trips & Productivity** → **Vehicle-wise Trip Report**. Then set the selectors described below.

Selector or button	What it does
From / To	First and last date to include, by the Book Date of the log book. Both start on today's date. Dates before 01-11-2026 cannot be chosen, From must not be after To, and the range can be at most 366 days. If the dates are not valid, the screen shows "Choose a valid date range of at most 366 days." and no data is loaded. Changing a date loads the data again.
Site	Keeps only the log books of one site. "All" keeps every site your login can see. Once a site is chosen, the Shift, Vehicle / equipment, Driver / operator and Work order lists show only that site's entries.
Shift	Keeps only the log books of the chosen shift. Every shift in the list belongs to one site, so shifts of the same name at two sites appear as separate entries. Choose Site first, then Shift.
Vehicle / equipment	Keeps only the log books of the chosen door number. The list also has equipment doors; choosing one of them leaves this table empty.
Driver / operator	Keeps only the log books saved in the name of the chosen person. The list has only the people found on the log books and scan cards of the chosen dates.
Work order	Keeps only the log books saved against the chosen work order. The list has only the work orders found on the log books and scan cards of the chosen dates.

3. What is on the screen

Picture 1. The report screen: selectors, totals and the table. *Sample data.*

On the screen	What it shows
Report	Drop-down at the top with every report, listed under its group. Choosing a name opens that report.
Saved operational records	Line under the report name. It repeats the From and To dates in use.
Refresh	Loads the saved log books again for the same dates. Press it when log books were saved or corrected after the report was opened. While data is loading the button cannot be pressed and "Loading complete report data…" is shown.
Filters:	One line listing the selectors that are set. With none set it reads "All sites, assets, shifts and employees". The line uses short names: site, shift, asset (Vehicle / equipment), employee (Driver / operator), workOrder and loading. For shift, asset and employee it shows the record number of the choice, not its name.
logbooks	Number of saved log books, VLB and ELB together, that match the dates and filters.
assets	Number of different vehicles and equipment on those log books.
trips	Total trips on those log books.

report rows	Number of rows in the table below.
Notice below the counts	"Utilisation = recorded running hours ÷ scheduled hours of recorded logbooks. Duplicate entries can inflate totals; missing logbooks are not counted as zero." It says how Utilisation % is worked out. It also says that a log book entered twice raises the totals, while a log book that was not entered is left out and is not counted as zero.
No matching records or exceptions found.	Shown inside the table when nothing matches the dates and filters.

4. The columns

Column	Meaning
Door NO	Door number of the vehicle, for example V9001.
Site	Site saved on the log books.
Caliber ID	Employee IDs of all the drivers on this vehicle's log books, each one once, separated by commas. Shows "ID not recorded" for a driver whose ID is missing.
Employee	Names of those drivers, in the same order as the IDs. Shows "Name not recorded" where a name is missing.
Logbooks	Number of saved Vehicle Log Books of this vehicle in the period.
Assets	Number of different vehicle records under this door number at this site. Normally 1.
Trips	Total trips of those log books.
KM	Total kilometres of those log books. For each book it is CLO KMR minus OPN KMR; if a book was saved with a separate actual distance because the meter was replaced, that distance is used.
Running HRS	Total running hours: CLO HMR minus OPN HMR of each log book, added up. Blank if any log book in the row has no HMR reading.
Scheduled HRS	Shift hours of the log books in the row, added up; for example 8 or 12 for each book. Blank if any log book has no shift hours.
Utilisation %	Running HRS ÷ Scheduled HRS × 100, to at most 3 decimal places. Blank when Running HRS or Scheduled HRS is blank, or Scheduled HRS is 0.

5. Keep in mind

- Only Vehicle Log Books are used. Equipment log books, LMV log books and deleted log books are not in this report.
- The four counts above the table take VLB and ELB together, so "logbooks" and "assets" can be more than the table shows.
- A trip is counted on the log book that has its loading time. A trip row with only an unloading time (a load taken over from the previous driver) is not counted again.

- A log book that was not entered is left out, not counted as zero, so the totals come out lower. A log book entered twice is counted twice, so the totals come out higher.
- A vehicle with log books at two sites in the period gets one row for each site.
- "Reset table" in the Actions menu of the table also puts From and To back to today's date.

6. Download, print and search

- Tables on this page have a **Generate** button: **Download as PDF**, **Download as Excel** or **Smart Print**. The file contains the whole table, not only the rows visible on screen.
- Type in **Search this report** to find a door number, driver or card inside a table.
- Press a column heading to sort by that column.
- If the page looks old after an update, press **Ctrl + F5** once.

7. Review checklist

Step	Do this
1	Set From and To to the period and choose Site.
2	Check that every vehicle that worked has a row. A vehicle with no saved log book in the period has no row.
3	Compare Logbooks with the number of shifts the vehicle worked in the period.
4	Compare Trips and KM between vehicles doing the same work. For a vehicle that stands out, choose it in Vehicle / equipment and open Vehicle Logbook Register to see each book.
5	Check Caliber ID and Employee against the drivers who were given the vehicle.

> **This manual shows how to read and verify the report.** What action to take on its findings is as instructed by management.

8. Common questions

Question	Answer
Why are there several names in Employee?	More than one driver has a saved log book for this vehicle in the period. Each driver is listed once.
How do I see one driver's figures for a vehicle?	Choose the driver in Driver / operator. Each row then adds up only that driver's log books.
Why is a vehicle missing from the table?	It has no saved Vehicle Log Book in the chosen dates, or its site is not one your login can see.
